   **Smart Client Architecture and Design Guide** ,2004 Get expert guidance for designing and building smart client applications on the Microsoft NET Framework including handling data connecting to the back end offline functionality security features multithreading deployment and performance     *Smart Client Architecture And Design Guide Version 1.0 Patterns And Practices* Hill Et Al.,     *The Definitive Guide to the Microsoft Enterprise Library* Keenan Newton,2008-06-08 The Definitive Guide to the Microsoft Enterprise Library introduces one of the most exciting and popular NET oriented initiatives the Enterprise Library The EL offers eight application blocks and other reusable code that are used to solve a variety of common problem spaces These problems cover a number of topics including data access exception handling caching logging security cryptography validation policy injection and configuration Author Keenan Newton a senior consultant for Microsoft Consulting Services begins the book with an introduction to common challenges explaining the conditions that brought about the creation of the EL After an EL overview subsequent chapters offer detailed information about each of the eight blocks The book concludes by outlining the framework available for creating custom application blocks as well as other development spaces using application blocks You ll be able to build NET applications faster and more efficiently by taking advantage of readily available code developed and released by Microsoft s patterns and practices group You will be introduced to these technologies in conjunction with real world scenarios     **Practical Software Factories in .NET** Gunther Lenz,Christoph Wienands,2006-11-22 The promise of software factories is to streamline and automate software development and thus to produce higher quality software more efficiently The key idea is to promote systematic reuse at all levels and exploit economies of scope which translates into concrete savings in planning development and maintenance efforts However the theory behind software factories can be overwhelming because it spans many disciplines of software development On top of that software factories typically require significant investments into reusable assets This book was written in order to demystify the software factories paradigm by guiding you through a practical case study from the early conception phase of building a software factory to delivering a ready made software product The authors provide you with a hands on example covering each of the four pillars of software factories software product lines architectural frameworks model driven development and guidance in context While the ideas behind software factories are platform independent the Microsoft NET platform together with recent technologies such as DSL Tools and the Smart Client Baseline Architecture Toolkit makes an ideal foundation A study shows the different facets and caveats and demonstrates how each of these technologies becomes part of a comprehensive factory Software factories are a top candidate for revolutionizing software development This book will give you a great starting point to understanding the concepts behind it and ultimately applying this knowledge to your own software projects Contributions by Jack Greenfield Wojtek Kozaczynski Foreword by Douglas C Schmidt Jack Greenfield Jorgen Kazmeier and Eugenio Pace     **International Conference on Applications and**

The pedagogy for technology enabled education over last few decades have been influenced by behaviorist cognitive and constructivist theories These theories are debated vigorously by the educational scientists While the debate is extremely important for the paradigm shift the need for a framework for instructional designers seeking meaningful incorporation of technology is necessary With the infusion of new technological methods to deliver education on line there is an acute need for reinvention of the pedagogical framework The new design framework to provide a flexible approach for incorporating technology within the context of pedagogy The interface of education is changing rapidly from classroom to blend of in class and on line activities to almost completely technology enabled educational environments The technological shift is taking place now from classroom teaching and learning to asynchronous Web based and Web supported learning environments The dissemination of educational content is surely moving from a teacher to student model to a technology enabled interface The shift of educational interfaces from synchronous to asynchronous passive to interactive television to desktop computers keyboard to handwriting recognition systems mouse to data glove touch screen to voice recognition systems real experiments to virtual experiments real educational space to virtual reality learning environments VRLE experiments in labs to teleoperated experiments from remote locations are all indicative of the technology trends which the educational designers have to face now to provide pedagogically effective educational technology components for learners
