The Miners Canary Unravelling The Mysteries Of Extinction:

The Miner's Canary Niles Eldredge, 2022-02-08 Like the bird whose death signaled dangerous conditions in a mine the demise of animals that once flourished should give humans pause How is our fate linked to the earth's creatures and the cycle of flourishing and extinction Which are the simple workings of nature's order and which are omens of ecological disaster Does human activity accelerate extinction What really causes it In an illuminating and elegantly written account of the widespread reduction of the world's wildlife renowned paleontologist Niles Eldredge poses these questions and examines humankind's role in the larger life cycles of the earth composing a provocative general theory of extinction

The Miner's Canary Niles Eldredge, 1993

E, 1992

No Turning Back Richard Ellis, 2009-10-06 Nearly every species that has lived on earth is extinct The last of the dinosaurs was wiped out after a Mount Everest sized meteorite slammed into the earth 65 million years ago The great flying and marine reptiles are no more Before humans crossed the Bering Land Bridge some 15 000 years ago North America was populated by mastodons mammoths saber toothed tigers and cave bears They too are MIA The passenger pigeon once the most numerous bird in North America is gone forever In *No Turning Back* renowned naturalist Richard Ellis explores the life and death of animal species immortalizing creatures that were driven to extinction thousands of years ago and those more recently He documents those that were brought back from the brink and most surprisingly he reveals animals not known to exist until the twentieth century an antidote to extinction

The Ten Facts of Evolution Phillip Engle, 2007-12 A book that resolves the conflict between Darwinism and intelligent design between science and teleology by means of Robert F DeHaan's theory of evolution called macrodevelopment

Global Biodiversity, 1995

Global Events and Event Stratigraphy in the Phanerozoic Otto H. Walliser, 2012-12-06 The existence of rapid and even catastrophic turnovers within the Phanerozoic ecosystems has been discussed controversially for more than 170 years Since 1980 this discussion has become even more intensive after the hypothesis of Alvarez explaining the end Cretaceous mass extinction as the result of a huge asteroid impact on the Earth This theory stimulated several thousand papers and is still controversial The international research programme on Global Biological Events in Earth History attempts to bring the discussion back to the facts by using multidisciplinary investigations of the major Phanerozoic events The results of an international group of experts are presented giving a wealth of information and a thorough discussion of the causes of the various global events

Extinction Paul B. Wignall, 2019-06-27 Most people are familiar with the dodo and the dinosaur but extinction has occurred throughout the history of life with the result that nearly all the species that have ever existed are now extinct Today species are disappearing at an ever increasing rate whilst past losses have occurred during several great crises Issues such as habitat destruction conservation climate change and during major crises volcanism and meteorite impact can all contribute towards the demise of a group In this Very Short Introduction Paul B Wignall looks at the causes and nature of extinctions past and present and the factors that can make a species vulnerable Summarising what we know about all of the

major and minor extinction events he examines some of the greatest debates in modern science such as the relative role of climate and humans in the death of the Pleistocene megafauna including mammoths and giant ground sloths and the roles that global warming ocean acidification and deforestation are playing in present day extinctions

ABOUT THE SERIES The Very Short Introductions series from Oxford University Press contains hundreds of titles in almost every subject area These pocket sized books are the perfect way to get ahead in a new subject quickly Our expert authors combine facts analysis perspective new ideas and enthusiasm to make interesting and challenging topics highly readable

Knowledge And Civilization Barry Allen, 2018-02-15 Offers a new original way of framing questions about knowledge Knowledge and Civilization advances detailed criticism of philosophy's usual approach to knowledge and describes a redirection away from textbook problems of epistemology toward an ecological philosophy of technology and civilization Rejecting theories that confine knowledge to language or discourse Allen situates knowledge in the greater field of artifacts technical performance and human evolution His wide ranging considerations draw on ideas from evolutionary biology archaeology anthropology and the history of cities art and technology

The Island of the Colorblind Oliver Sacks, 2012-11-14 Part travelogue part autobiography part medical mystery this moving book by the poet laureate of medicine The New York Times and bestselling author of *Awakenings* takes us to a tiny Pacific atoll and the island of Guam to explore the genesis of disease the wonders of botany and the complexities of being human Sacks's total immersion in island life makes this luminous beautifully written report a wondrous voyage of discovery As a travel writer Sacks ranks with Paul Theroux and Bruce Chatwin As an investigator of the mind's mysteries he is in a class by himself Publishers Weekly For Oliver Sacks islands conjure up equally the romance of Melville and Stevenson the adventure of Magellan and Cook and the scientific wonder of Darwin and Wallace Drawn to the tiny Pacific atoll of Pingelap by intriguing reports of an isolated community of islanders born totally color blind Sacks finds himself setting up a clinic in a one room island dispensary where he listens to these achromatopic islanders describe their colorless world in rich terms of pattern and tone luminance and shadow And on Guam where he goes to investigate the puzzling neurodegenerative paralysis endemic there for a century he becomes for a brief time an island neurologist making house calls with his colleague John Steele amid crowing cockerels cycad jungles and the remains of a colonial culture Out of this unexpected journey Sacks has woven an unforgettable narrative which immerses us in the romance of island life and shares his own compelling vision of the mysteries of being human

The Last Extinction Les Kaufman, Kenneth Mallory, 1993 An expanded updated edition of this classic study on biodiversity and species loss

[Animal Rights](#) John M. Kistler, 2000-06-30 Introductions to each chapter explain the issues as well as the arguments that surround them and a general introduction to the volume thoroughly explains how to use the book Each entry contains the following information author title edition series title location of publisher name of publisher number of pages year of publication and International Standard Book Number Annotations include the most important information available to help the researcher

including web sites that contain not only the full text of the book when available but also excerpts and articles or interviews by the author short quotations from the books and short descriptions and summaries of the books All the information provided allows students to locate exactly what they need while encouraging them to explore other issues and differing viewpoints

The Sixth Extinction Terry Glavin, 2025-08-22 The Sixth Extinction is a haunting account of the age in which we live Ecologists are calling it the Sixth Great Extinction and the world isn't losing just its ecological legacy also vanishing is a vast human legacy of languages and our ways of living seeing and knowing Terry Glavin confirms that we are in the midst of a nearly unprecedented catastrophic vanishing of animals plants and human cultures He argues that the language of environmentalism is inadequate in describing the unraveling of the vast system in which all these extinctions are actually related And he writes that we're no longer gaining knowledge with every generation We're losing it In the face of what he describes as a dark and gathering sameness upon the Earth Glavin embarks on a global journey to meet the very things we're losing a distinct species every ten minutes a unique vegetable variety every six hours an entire language every two weeks and on the way encounters some of the world's wonderful rare things a human sized salmon in Russia a mysterious Sino Tibetan song language a Malayan tiger the last of its kind and a strange tomato that tastes just like black cherry ice cream And he finds hope in the most unlikely places a macaw roost in Costa Rica a small village in Ireland a relic community of Norse whalers in the North Atlantic the vault beneath the Royal Botanical Garden at Kew and the throne room of the Angkor Longwa in the eastern Himalayas A fresh narrative take on the usual doom and gloom environmentalism The Sixth Extinction draws upon zoology biology ecology anthropology and mythology to share the joys hidden within the long human struggle to conserve the world's living things Here we find hope in what's left the absolute and stunning beauty in the Earth's last cultures and creatures

No Hiding Place John Barrie, 1996 In this collection of essays John Barrie explores the exciting thinking about the new nature as it appears to a non scientist In No Hiding Place the author outlines some of the intellectual restructuring which Neo Darwinism insists that we make Also included are essays on a number of poets including R S Thomas A R Ammons USA and Harry Martinson Sweden who in various ways have responded to the pressures of the new thinking about nature on our lives

Extinctions in Near Time Ross D.E. MacPhee, Hans-Dieter Sues, 2013-11-09 Near time an interval that spans the last 100 000 years or so of earth history qualifies as a remarkable period for many reasons From an anthropocentric point of view the outstanding feature of near time is the fact that the evolution cultural diversification and global spread of Homo sapiens have all occurred within it From a wider biological perspective however the hallmark of near time is better conceived of as being one of enduring repeated loss The point is important Despite the sense of uniqueness implicit in phrases like the biodiversity crisis meant to convey the notion that the present bout of extinctions is by far the worst endured in recent times substantial losses have occurred throughout near time In the majority of cases these losses occurred when and only when people began to expand across areas that had never before experienced their presence

Although the explanation for these correlations in time and space may seem obvious it is one thing to rhetorically observe that there is a connection between humans and recent extinctions and quite another to demonstrate it scientifically How should this be done Traditionally the study of past extinctions has fallen largely to researchers steeped in such disciplines as paleontology systematics and paleoecology The evaluation of future losses by contrast has lain almost exclusively within the domain of conservation biologists Now more than ever there is opportunity for overlap and sharing of information

Cycles in Humans and Nature John T. Burns, 1994 This volume is the first bibliography to be published on the broad subject of cycles in humans and nature The importance of cycles as a model for understanding the world is as old as the Bible and other ancient records of past civilizations The modern investigation of diverse fields of study has resulted in the concept of cycles once again gaining center stage as an interdisciplinary model for reaching a better understanding of the nature of our universe Major categories of cycles covered in this bibliography are Astrophysics Atmospheric Science Biology Botany Geoscience Medicine Social Science Zoology and Interdisciplinary Over 600 sources of information on thousands of cycles are carefully reviewed to enable the reader maximum access to the most substantive evidence for cycles in each field A balance of general readings as well as more technical articles is maintained throughout the bibliography An introduction provides an overview of the broad spectrum of information on cycles indicating those areas of controversy as well as of agreement The claims of cycles in social unrest economics and climatology are noted as well as the more well known cycles in biology physiology and medicine The volume has an extensive table of contents to facilitate the location of many subcategories of cycles An extensive index also enables the location of citations for specific researchers and for numerous subjects

Systemic Management Charles W. Fowler, 2009-03-26 Systemic management describes a holistic objective and universally applicable form of management providing a framework for addressing environmental challenges such as global warming emergent diseases deforestation overpopulation the extinction crisis pollution over fishing and habitat destruction Its goals are the consistently sustainable relationships between humans and ecosystems between humans and other species and between humans and the biosphere This book presents a convincing argument that these goals and the means to achieve them can be inferred from empirical information It describes how comparisons between humans and other species reveal patterns that can serve to guide management toward true sustainability i.e. ways that are empirically observed to work in natural systems This objective approach has rarely been possible in conventional management because sustainability is invariably undermined by conflicting human values Systemic management is presented as a specialized process of pattern based decision making that avoids the inconsistency subjectivity and error in current management practice It clearly demonstrates how mimicking nature's empirical examples of sustainability can circumvent anthropocentric tendencies to overuse misuse human values in management and illustrates the science best suited for achieving sustainability through examples of research that address specific management questions

Life on Earth Niles Eldredge, 2002-12-17 An

examination of nature's extraordinary biological diversity and the human activities that threaten it *Life on Earth* An Encyclopedia of Biodiversity Ecology and Evolution tackles the critical issue for humanity in the 21st century our ever more menacing impact on the environment This two volume illustrated set edited by American Museum of Natural History curator Niles Eldredge begins with biodiversity the complex planetary web of life that has emerged through three billion years of evolution How does it work And why is its continued health critical to the planet and to ourselves More than 50 top scholars examine every form of life from amoebae to elephants from plankton to whales But *Life on Earth* is more than a catalog of species An A Z survey explores the myriad ways humanity is diminishing that biodiversity from industrialization to natural habitat destruction from overpopulation in the developing world to an unsustainable consumer lifestyle in the West *Life on Earth* is the essential reference work for anyone curious about our planet's extraordinary diversity of life and the unprecedented threats it faces

The International Politics of Whaling Peter J. Stoett, 2011-11-01 Whales large mysterious intelligent and endangered In 1986 a global moratorium on whaling was issued by the International Whaling Commission However that decision was not without controversy Some countries such as Norway continue to whale in defiance of the ban In this fascinating book Peter Stoett combines ecological sensitivity with a hard assessment of the political realities of the international regime to examine this important issue *The International Politics of Whaling* examines contemporary whaling issues with an emphasis on three factors our knowledge of whales and current whale populations and the impact of whaling the actors and institutions involved in the debate over whaling and the ethical dimension Reluctantly he concludes that the current global moratorium on whaling is problematic and that we must focus instead on habitat preservation in order to protect whales more effectively

Ice Age Florida Robert W. Sinibaldi, 2021-05-19 *Ice Age Florida* In Story and Art By Robert W Sinibaldi and illustrated by Hermann Trappman Florida's Ice Age was vastly different from what the North experienced *Ice Age Florida* In Story and Art investigates and illustrates the fascinating fossil record and history of the Gulf Coast compared to what most envision when the term Ice Age comes up The author takes the reader along on his initial and developing interest in fossil diving and details his insatiable curiosity about the fauna of Florida's Ice Age all vividly represented by the amazing artwork of Hermann Trappman
