The Models Of Project Link:

Econometric Models of Asian Link Shinichi Ichimura, Mitsuo Ezaki, 2012-12-06 This is the first outcome of our effort in ASIAN LINK PROJECT to construct the econometric models of Asian developing countries and analyze their inter dependence with major trading partners the United States and Japan The model we present here is called Asian Link System The countries in this system include Korea Taiwan Hong Kong China the Philippines Thailand Malaysia Singapore Indonesia Japan and the United States They are covered by national models The rest of the world is divided into several regions and treated by simple proto type models The main characteristics of Asian Link System are to deal with the inter dependent relations between Asian developing countries on the one hand and Japan and United States on the other hand Here are presented these national models and the Asian Link System with the underlying statistical data so that any econometrician can re estimate our models and check the results of our research work Nowadays most articles and books in econometrics report only the final results or conclusions of research so that no other econometrician can re calculate or re examine the findings This is very serious in the empirical research because as theorists may make mistakes positive economists do commit errors or miss some possible considerations Unless statistical data are offered other econometricians cannot make suggestions or improve the models This is the main reason why empirical research in econometrics or applied econometrics are not making substantial progress in recent years

Global International Economic Models B.G. Hickman, 2014-06-28 This volume surveys the state of the art of global international modeling All 15 models included in the survey feature national or regional disaggregation of the world economy and interdependencies among the various nations and regions A few are constructed for short term forecasting but the primary focus is on long run models and applications Macroeconomic input output general equilibrium trade and exchange rate and several hybrid models are included A cross sectional analysis by the editor compares the structures linkage mechanisms methodologies and applications of the various models and concludes with some observations on prospective research trends

Macroeconometric Models Władysław Welfe, 2013-02-15 This book gives a comprehensive description of macroeconometric modeling and its development over time The first part depicts the history of macroeconometric model building starting with Jan Tinbergen's and Lawrence R Klein's contributions It is unique in summarizing the development and specific structure of macroeconometric models built in North America Europe and various other parts of the world The work thus offers an extensive source for researchers in the field The second part of the book covers the systematic characteristics of macroeconometric models It includes the household and enterprise sectors disequilibria financial flows and money market sectors

Macroeconometric Modeling of Japan Shinichi Ichimura, Lawrence Robert Klein, 2010 This book offers the representative macro econometric models and their applications for the Japanese economy in different development stages throughout postwar years up to the present It presents a summary of three types of macro

econometric models and analyses Social accounting analyses of national income and related indices following the tradition of C Clark S Kuznets R Stone and World Bank Development Reports Inter industrial and inter regional analyses of the Japanese economy a la W Leontief and the CGE computable general equilibrium type of applications to Comprehensive Development Plans Macro econometric model building for the Japanese economy and its applications with a survey of various models in Japan including the historic Osaka University ISER Institute of Social and Economic Research model and present day Government models As many Asian economies are going through the stages of development that Japan has experienced for the past few decades to them and other developing countries this book will be extremely relevant as a reference for years to come Conference on Pacific Area Economic Models of Project LINK, July 11-12, 1983 ,1983

Italianer,2012-12-06 This book was mainly written while I stayed at the Catholic University of Louvain Professor Anton P Barten was the one who did not only give me a warm welcome in Louvain but also supported my research with most valuable comments and constructive criticisms In addition I benefitted from discussions with Erik Schokkaert Denis de Crombrughe and Jo Baras on various subjects such as the small sample correction of Chapter 9 The arduous task of transferring my neat handwriting into a readable typescript was excellently taken care of by Brs E Crabbe and notably Brs F Duijsens even after working hours Mrs A Molders prevented me of making serious abuse of the English language My admiration for Carien finally is an exponential function of the patience and enthusiasm with which she supported my research Chapter I is a general introduction to the subject of linkage models and it contains few mathematical elaborations Chapters 2 to 4 use more but elementary mathematics and treat several aspects related to the derivation interpretation and estimation of linkage models Chapter 2 deals with the theory of import allocation models

Chapter J treats the problem of defining and interpreting elasticities of substitution while Chapter 4 is concerned with the econometric problems related to the estimation of multivariate models with linear restrictions such as import allocation models
