Schaller, 1962 *The Predatory Behavior of Wild Chimpanzees* Geza Teleki, 1973 Geza Teleki has spent two years observing wild chimpanzees at very close quarters in the Gombe National Park of Tanzania He has compiled this report on predatory behavior based in part upon a decade of observations by a research team living in the park but primarily upon numerous episodes he observed since early 1968 Illustrated *Feeding Ecology in Apes and Other Primates* Gottfried Hohmann, Martha M. Robbins, Christophe Boesch, 2006 This book presents an evolutionary perspective on feeding behaviour in human and non human primates **The Status of Wild Primates** Jaclyn H. Wolfheim, 1974 King of the Mountain Arnold M. Ludwig, 2013-07-24 People may choose to ignore their animal heritage by interpreting their behavior as divinely inspired socially purposeful or even self serving all of which they attribute to being human but they masticate fornicate and procreate much as chimps and apes do so they should have little cause to get upset if they learn that they act like other primates when they politically agitate debate abdicate placate and administrate too King of the Mountain presents the startling findings of Arnold M Ludwig s eighteen year investigation into why people want to rule The answer may seem obvious power privilege and perks but any adequate answer also needs to explain why so many rulers cling to power even when they are miserable trust nobody feel besieged and face almost certain death Ludwig s results

suggest that leaders of nations tend to act remarkably like monkeys and apes in the way they come to power govern and rule Profiling every ruler of a recognized country in the twentieth century over 1 900 people in all Ludwig establishes how rulers came to power how they lost power the dangers they faced and the odds of their being assassinated committing suicide or dying a natural death Then concentrating on a smaller sub set of 377 rulers for whom more extensive personal information was available he compares six different kinds of leaders examining their characteristics their childhoods and their mental stability or instability to identify the main predictors of later political success Ludwig s penetrating observations though presented in a lighthearted and entertaining way offer important insight into why humans have engaged in war throughout recorded history as well as suggesting how they might live together in peace

The Evolution of Primate Societies John C. Mitani,Josep Call,Peter M. Kappeler,Ryne A. Palombit,Joan B. Silk,2012-10-24 In 1987 the University of Chicago Press published *Primate Societies* the standard reference in the field of primate behavior for an entire generation of students and scientists But in the twenty five years since its publication new theories and research techniques for studying the Primate order have been developed debated and tested forcing scientists to revise their understanding of our closest living relatives Intended as a sequel to *Primate Societies* *The Evolution of Primate Societies* compiles thirty one chapters that review the current state of knowledge regarding the behavior of nonhuman primates Chapters are written by the leading authorities in the field and organized around four major adaptive problems primates face as they strive to grow maintain themselves and reproduce in the wild The inclusion of chapters on the behavior of humans at the end of each major section represents one particularly novel aspect of the book and it will remind readers what we can learn about ourselves through research on nonhuman primates The final section highlights some of the innovative and cutting edge research designed to reveal the similarities and differences between nonhuman and human primate cognition *The Evolution of Primate Societies* will be every bit the landmark publication its predecessor has been

The Oxford Handbook of Evolutionary Perspectives on Violence, Homicide, and War Todd K. Shackelford,Viviana A. Principles, Practices, and Positions in Neuropsychiatric Research Joseph V. Brady,Walle J. H. Nauta,2013-10-22 *Principles Practices and Positions in Neuropsychiatric Research* contains the proceedings of a conference held in June 1970 at the Walter Reed Army Institute of Research Washington D C in tribute to Dr David McKenzie Rioch upon his retirement as Director of the Neuropsychiatry Division of that institute This book is composed of the original contributions presented at the conference as well as several invited papers that could not be programmed at the meeting because of certain limitations

Topics covered in some papers focus on anatomy of the thalamus glia neuronal interaction receptor characteristics and conduction velocities in bladder afferents responses of photoreceptors and specificity of responses of cells in the visual cortex This text also discusses the channeling of responses elicited by hypothalamic stimulation neurochemistry of reward and punishment behavioral analysis of aphasia and biology of sleep The military psychiatry and changing systems of mental health care as well as psychological issues in training for research in psychiatry are also addressed The contributions in this book will serve to reflect the remarkable range of bio social research interest and competence **Advanced Views in**

Primate Biology A. B. Chiarelli, R. S. Corruccini, 2012-12-06 **Primates and Cetaceans** Juichi Yamagiwa, Leszek Karczmarski, 2013-11-20 In this book the editors present a view of the socioecology of primates and cetaceans in a comparative perspective to elucidate the social evolution of highly intellectual mammals in terrestrial and aquatic environments Despite obvious differences in morphology and eco physiology there are many cases of comparable sometimes strikingly similar patterns of sociobehavioral complexity A number of long term field studies have accumulated a substantial amount of data on the life history of various taxa foraging ecology social and sexual relationships demography and various patterns of behavior from dynamic fission fusion to long term stable societies from male bonded to bisexually bonded to matrilineal groups Primatologists and cetologists have come together to provide four evolutionary themes 1 social complexity and behavioral plasticity 2 life history strategies and social evolution 3 the interface between behavior demography and conservation and 4 selected topics in comparative behavior These comparisons of taxa that are evolutionarily distant but live in comparable complex sociocognitive environments boost our appreciation of their sophisticated mammalian societies and can advance our understanding of the ecological factors that have shaped their social evolution This knowledge also facilitates a better understanding of the day to day challenges these animals face in the human dominated world and may improve the capacity and effectiveness of our conservation efforts Human Adaptation Yehudi A. Cohen, 2017-07-12 Underlying the anthropological study of humans is the principle that there is a reality to which a human must adapt for survival Populations must adapt to the realities of the physical world and maintain a proper fit between their biological makeup and the pressures of the various niches of the world Social groups must develop adaptive mechanisms in the organization of their social relations if there is to be order regularity and predictability in patterns of cooperation and competition This book presents an introduction to anthropology that is unified and made systematic by its focus on adaptations that have accompanied the evolution of humans from non human primates to inhabitants of vast urban areas in modern industrial societies Human Adaptation contains over forty outstanding essays that are intended to serve as an introduction to physical anthropology archeology and linguistics from the point of view of the processes of adaptation The organization of these selections contains a balance between biological and prehistoric cultural adaptations They provide coherence for the study of human evolution Several selections notably those in connection with linguistic adaptations deal

with contemporary people in order to shed light on earlier evolutionary processes More than half of the selections deal with biological evolution This volume unifies the subject matter of anthropology within a single and powerful explanatory framework and incorporates the work of the most renowned anthropological experts on man
