Montgomery,2022-03-29 The Moon is at once a face with a thousand expressions and the archetypal planet Throughout history it has been gazed upon by people of every culture in every walk of life From early perceptions of the Moon as an abode of divine forces humanity has in turn accepted the mathematized Moon of the Greeks the naturalistic lunar portrait of Jan van Eyck and the telescopic view of Galileo Scott Montgomery has produced a richly detailed analysis of how the Moon has been visualized in Western culture through the ages revealing the faces it has presented to philosophers writers artists and scientists for nearly three millennia To do this he has drawn on a wide array of sources that illustrate mankind s changing concept of the nature and significance of heavenly bodies from classical antiquity to the dawn of modern science Montgomery especially focuses on the seventeenth century when the Moon was first mapped and its features named From literary explorations such as Francis Godwin s Man in the

Moone and Cyrano de Bergerac's *L'autre monde* to Michael Van Langren's textual lunar map and Giambattista Riccioli's *Almagestum novum* he shows how Renaissance man was moved by the lunar orb how he battled to claim its surface and how he in turn elevated the Moon to a new level in human awareness The effect on human imagination has been cumulative our idea of the Moon and therefore the planets is multilayered and complex having been enriched by associations played out in increasingly complicated harmonies over time We have shifted the way we think about the lunar face from a perfect body to an earthlike one with corresponding changes in verbal and visual expression Ultimately Montgomery suggests our concept of the Moon has never wandered too far from the world we know best the Earth itself And when we finally establish lunar bases and take up some form of residence on the Moon's surface we will not be conquering a New World fresh and mostly unknown but a much older one ripe with history *Environment, Space, Place - Volume 2, Issue 1 (Spring 2010)* Gary

Elemental Philosophy David Macauley, 2010-09-29 Bachelard called them the hormones of the imagination Hegel observed that through the four elements we have the elevation of sensuous ideas into thought Earth air fire and water are explored as both philosophical ideas and environmental issues associated with their classical and perennial conceptions David Macauley embarks upon a wide ranging discussion of their initial appearance in ancient Greek thought as mythic forces or scientific principles to their recent reemergence within contemporary continental philosophy as a means for understanding landscape and language poetry and place the body and the body politic In so doing he shows the importance of elemental thinking for comprehending and responding to ecological problems In tracing changing views of the four elements through the history of ideas Macauley generates a new vocabulary for and a fresh vision of the environment while engaging the elemental world directly with reflections on their various manifestations
