**Worlds in Shadow** Patrick Nunn, 2021-08-05 Discover ancient civilizations that have disappeared beneath the ocean's surface and explore how the science of submergence adds to our knowledge of human history The traces of much of human history and that which preceded it lie beneath the ocean surface broken up dispersed often buried and always mysterious This is fertile ground for speculation even myth making but also a topic on which geologists and climatologists have increasingly focused in recent decades We now know enough to tell the true story of some of the continents and islands that have disappeared throughout Earth's history to explain how and why such things happened and to unravel the effects of submergence on the rise and fall of human civilizations In *Worlds in Shadow* Patrick Nunn sifts the facts from the fiction using the most up to date research to work out which submerged places may have actually existed versus those that probably only exist in myth He looks at the descriptions of recently drowned lands that have been well documented those that are plausible and those that almost certainly didn't exist Going even further back Patrick examines the presence of more ancient lands submerged beneath the waves in a time that even the longest reaching folk memory can't touch Such places may have played important roles in human evolution but can only be reconstructed through careful geological detective work Exploring how lands become submerged whether from sea level changes tectonic changes gravity collapse giant waves or volcanoes helps us determine why when and where land may disappear in the future and what might be done to prevent it
