decrease in the incidence of both primary and secondary cardiac events and mortality there is growing widespread acknowledgment that health care providers from all arenas must initiate preventive strategies in the management and care of their patients

Clinical and Biological Basis of Lung Cancer Prevention Yves Martinet, F.R. Hirsch, J. Mulshine, J.M. Vignaud, 2012-12-06 Lung cancer is a disease with pandemic public health implications as it is now the leading cause of cancer mortality throughout the world This book results from two recent International Association for the Study of Lung Cancer IASLC Workshops on lung cancer prevention It strikes a balance between considering public health approaches to tobacco control and population based screening advances in clinical evaluation of chemoprevention approaches and the biology of lung carcinogenesis Indeed while the science of smoking cessation is evolving as new pharmacological tools are moving into clinical evaluation the current impact of molecular diagnostics is profound The rapidly evolving diagnostic technologies are revolutionizing basic scientific investigation of cancer and this trend is expected to soon spill over into the clinical practice of medicine The evolution of economical diagnostic platforms to allow for direct bronchial epithelial evaluation in high risk populations promises to improve the diagnostic lead time for this disease The hope is that enough progress will occur to permit lung cancer detection in advance of clinical cancer so that the disease can be addressed early on while it is still confined to the site of origin Chemoprevention which is designed to intervene in the early phase of carcinogenesis prior to any subjective clinical manifestation of a cancer is also generating greater research interest Moreover the benefit of aerosolized administration of chemoprevention agents over conventional oral administration has strong appeal and may result in the reduction of the incidence of cancer when combined with new diagnostic technologies
