## **The Modeling:**

The Practice of Enterprise Modeling Patrick van Bommel, Stijn Hoppenbrouwers, Sietse Overbeek, Joseph Barjis, 2010-11-03 This volume constitutes the proceedings of the Third IFIP WG 8.1 Working Conference on the Practice of Enterprise Modeling held in Delft The Netherlands during November 9-10 2010 The goal of the conference is both to foster a better understanding of the practice of enterprise modeling and to improve its theoretical foundations The 17 papers presented were carefully reviewed and selected from 44 submissions They reflect the trend for both practitioners and academics to look into domains and conceptualizations addressing dedicated business oriented topics like business intelligence or domain driven process families and thus reach beyond traditional information systems engineering

**The Practice of Enterprise Modeling** Janis Stirna, Anne Persson, 2008-11-07 Enterprise modeling EM has gained substantial popularity both in the academic community and among practitioners A variety of EM methods approaches and tools are developed and offered on the market In practice they are used for various purposes such as business strategy development process restructuring as well as business and IT architecture alignment and governance PoEM 2008 the First IFIP WG 8.1 Working Conference on The Practice of Enterprise Modeling took place in Stockholm Sweden It is the first conference aiming to establish a dedicated forum where the use of EM in practice is addressed by bringing together researchers users and practitioners The goals of PoEM 2008 were to develop a better understanding of the practice of EM to contribute to improved EM practice as well as to share knowledge and experiences The theme of PoEM 2008 was EM in different application contexts e.g. software development including agile development as well as business development governance and change

Enterprise Modeling Kurt Sandkuhl, Janis Stirna, Anne Persson, Matthias Wißotzki, 2014-09-15 Enterprise modeling EM methods and techniques are indispensable for understanding the present situation of an enterprise and for preparing for its future particularly in times of continuous organizational change an increasing pace of innovation new market challenges or technology advances The authors combine a detailed description of the 4EM methodology with their concrete experience gathered in projects Their book addresses the modeling procedure modeling language and modeling practices in a uniquely integrated approach It provides practical advice on common challenges faced by enterprises and offers a flexible EM method suitable for tackling those challenges Much of the work presented stems from actual research projects and has been validated with scientific methods The 4EM methodology has proven its practical value in a large number of successful development and/or change management projects in industry and the public sector The book was written for anyone who wants to learn more about EM with a specific focus on how to do it in practice and/or how to teach it Its main target audience thus includes instructors in the field of EM or business information systems students in Information Systems or Business Administration and practitioners working in enterprise or change management The authors describe a clear reading path for each of these audiences and complement the work with a set of slides and further teaching material available under [www.4em.de](http://www.4em.de)

Ginzburg, 2016-04-19 Expanding the risk assessment toolbox this book provides a comprehensive and practical evaluation of specific ecological models for potential use in risk assessment Ecological Modeling in Risk Assessment Chemical Effects on Populations Ecosystems and Landscapes goes beyond current risk assessment practices for toxic chemicals as applied to individual organism endpoints to describe ecological effects models useful at the population ecosystem and landscape levels The authors demonstrate the utility of a set of ecological effects models eventually improving the ecological relevance of risk assessments and making data collection more cost effective      *Data-Driven Model-Free Controllers* Radu-Emil Precup, Raul-Cristian Roman, Ali Safaei, 2021-12-26 This book categorizes the wide area of data driven model free controllers reveals the exact benefits of such controllers gives the in depth theory and mathematical proofs behind them and finally discusses their applications Each chapter includes a section for presenting the theory and mathematical definitions of one of the above mentioned algorithms The second section of each chapter is dedicated to the examples and applications of the corresponding control algorithms in practical engineering problems This book proposes to avoid complex mathematical equations being generic as it includes several types of data driven model free controllers such as Iterative Feedback Tuning controllers Model Free Controllers intelligent PID controllers Model Free Adaptive Controllers model free sliding mode controllers hybrid model free and model free adaptive Virtual Reference Feedback Tuning controllers hybrid model free and model free adaptive fuzzy controllers and cooperative model free controllers The book includes the topic of optimal model free controllers as well The optimal tuning of model free controllers is treated in the chapters that deal with Iterative Feedback Tuning and Virtual Reference Feedback Tuning Moreover the extension of some model free control algorithms to the consensus and formation tracking problem of multi agent dynamic systems is provided This book can be considered as a textbook for undergraduate and postgraduate students as well as a professional reference for industrial and academic researchers attracting the readers from both industry and academia      *Federal Register* ,2008-07-14      **Managing Business Complexity** Michael J. North, Charles M. Macal, 2007-03-01 Agent based modeling and simulation ABMS a way to simulate a large number of choices by individual actors is one of the most exciting practical developments in business modeling since the invention of relational databases It represents a new way to understand data and generate information that has never been available before a way for businesses to view the future and to understand and anticipate the likely effects of their decisions on their markets and industries It thus promises to have far reaching effects on the way that businesses in many areas use computers to support practical decision making Managing Business Complexity is the first complete business oriented agent based modeling and simulation resource It has three purposes first to teach readers how to think about ABMS that is about agents and their interactions second to teach readers how to explain the features and advantages of ABMS to other people and third to teach readers how to actually implement ABMS by building agent based

simulations It is intended to be a complete ABMS resource accessible to readers who haven't had any previous experience in building agent based simulations or any other kinds of models for that matter It is also a collection of ABMS business applications resources all assembled in one place for the first time In short Managing Business Complexity addresses who needs ABMS and why where and when ABMS can be applied to the everyday business problems that surround us and how specifically to build these powerful agent based models

J. Michael Scott, Patricia Heglund, Michael L. Morrison, 2002-02 Predictions about where different species are where they are not and how they move across a landscape or respond to human activities if timber is harvested for instance or stream flow altered are important aspects of the work of wildlife biologists land managers and the agencies and policymakers that govern natural resources Despite the increased use and importance of model predictions these predictions are seldom tested and have unknown levels of accuracy Predicting Species Occurrences addresses those concerns highlighting for managers and researchers the strengths and weaknesses of current approaches as well as the magnitude of the research required to improve or test predictions of currently used models The book is an outgrowth of an international symposium held in October 1999 that brought together scientists and researchers at the forefront of efforts to process information about species at different spatial and temporal scales It is a comprehensive reference that offers an exhaustive treatment of the subject with 65 chapters by leading experts from around the world that review the history of the theory and practice of modeling and present a standard terminology examine temporal and spatial scales in terms of their influence on patterns and processes of species distribution offer detailed discussions of state of the art modeling tools and descriptions of methods for assessing model accuracy discuss how to predict species presence and abundance present examples of how spatially explicit data on demographics can provide important information for managers An introductory chapter by Michael A. Huston examines the ecological context in which predictions of species occurrences are made and a concluding chapter by John A. Wiens offers an insightful review and synthesis of the topics examined along with guidance for future directions and cautions regarding misuse of models Other contributors include Michael P.
