Parallel and Constraint Logic Programming Ioannis Vlahavas, Panagiotis

Tsarchopoulos, Ilias Sakellariou, 2012-12-06 Constraint Logic Programming CLP an area of extreme research interest in recent years extends the semantics of Prolog in such a way that the combinatorial explosion a characteristic of most problems in the field of Artificial Intelligence can be tackled efficiently By employing solvers dedicated to each domain instead of the unification algorithm CLP drastically reduces the search space of the problem which leads to increased efficiency in the execution of logic programs CLP offers the possibility of solving complex combinatorial problems in an efficient way and at the same time maintains the advantages offered by the declarativeness of logic programming The aim of this book is to present parallel and constraint logic programming offering a basic understanding of the two fields to the reader new to the area The first part of the book gives an introduction to the fundamental aspects of conventional logic programming which is necessary for understanding the parts that follow The second part includes an introduction to parallel logic programming architectures and implementations proposed in the area Finally the third part presents the principles of constraint logic programming The last two parts also include descriptions of the supporting facilities for the two paradigms in two popular systems ECLIPSe and SICStus These platforms have been selected mainly because they offer both parallel and constraint features Annotated and explained examples are also included in the relevant parts offering a valuable guide and a first practical experience to the reader Finally applications of the covered paradigms are presented The authors felt that a book of this kind should provide some theoretical background necessary for the understanding of the covered logic programming paradigms and a quick start for the reader interested in writing parallel and constraint logic programming programs However it is outside the scope of this book to provide a deep theoretical background of the two areas In that sense this book is addressed to a public interested in obtaining a knowledge of the domain without spending the time and effort to understand the extensive theoretical work done in the field namely postgraduate and advanced undergraduate students in the area of logic programming This book fills a gap in the current bibliography since there is no comprehensive book of this level that covers the areas of conventional parallel and constraint logic programming Parallel and Constraint

Logic Programming An Introduction to Logic Parallelism and Constraints is appropriate for an advanced level course on Logic Programming or Constraints and as a reference for practitioners and researchers in industry

Access to Plant Genetic Resources and the Equitable Sharing of Benefits International Plant Genetic Resources Institute,1996 The 6th session of the FAO Commission on Plant Genetic Resources requested that IPGRI study the feasibility of possible systems for the exchange of plant genetic resources for food and agriculture PGRFA 1 and the equitable sharing of benefits The following report is the result of that study It seeks to provide the Commission with a set of options and their implications and thus to inform international negotiationsconcerning the revision of the International Undertaking on Plant Genetic Resources As part of the study process a wide series of consultations was held with major stakeholder groups A fundamental justification for conserving and characterizing PGRFA is their potential for use in the development of improved crop varieties These improved varieties are necessary to meet the food needs of a growing population and the demands of changing agro ecological and social conditions

Parallel Execution of Logic Programs Anthony Beaumont,1991-12-11 Logic programming refers to execution of programs written in Horn logic Among the advantages of this style of programming are its simple declarativeand procedural semantics high expressive power and inherent nondeterminism The papers included in this volume were presented at the Workshop on Parallel Logic Programming held in Paris on June 24 1991 as part of the 8th International Conference on Logic Programming The papers represent the state of the art in parallel logic programming and report the current research in this area including many new results The three essential issues in parallel execution of logic programs which the papers address are Which form s of parallelism or parallelism and parallelism stream parallelism data parallelism etc will be exploited Will parallelism be explicitly programmed by programmers or will it be exploited implicitly without their help Which target parallel architecture will the logic program s run on

Naturalism and Protectionism in the Study of Religions Juraj Franek, 2020-02-06 How should we study religion Must we be religious ourselves to truly understand it Do we study religion to advance our knowledge or should the study of religions help to reintroduce the sacred into our increasingly secularized world Juraj Franek argues that the study of religion has long been split into two competing paradigms reductive naturalist and non reductive protectionist While the naturalistic approach seems to run the risk of explaining religious phenomena away the protectionist approach appears to risk falling short of the methodological standards of modern science Franek uses primary source material from Greek and Latin sources to show that both competing paradigms are traceable to Presocratic philosophy and early Christian literature He presents the idea that naturalists are distant heirs not only of the French Enlightenment but also of the Ionian one Likewise he argues that protectionists owe much of their arguments and strategies not only to Luther and the Reformation but to the earliest Christian literature This book analyses the conflict between reductive and non reductive approach in the modern study of religions and positions the Cognitive Science of Religion against a background of previous theories ancient and modern to demonstrate its importance for the revindication of the naturalist paradigm

The Eureka Software Factory project ESF was set up by a Group of European partners in 1987 Its objective was broadly to improve the large scale software production process by introducing an industrialised approach to have The Software Factory Challenge social organisational and technical aspects The project was set up under the pan European Eureka programme and it was funded by the partners together with their national governments This book is not a history of the ESF project but rather a presentation of its main ideas and achievements and an account of how the concepts pioneered by the project have become part of a general movement in both the industrial and academic domains In this movement the facility for the production use and maintenance of large scale computer artefacts the Software Factory is treated in a wide and organic way so as to include concepts such as business value and process improvement with the development of new technologies being driven by these new wide requirements This new approach is in contrast with a narrowly technological one in which individual tasks like programming are aided by machines but in which the production process as a whole is not supported The main body of the book is divided into four Parts Part I gives a short overview of the ESF project and its ideas and goes on to attempt to place the ESF work in the context of industry as a whole with reference to both producers and users of Information Technology systems Part II sets out to explain the technological basis of the Software Factory as seen by ESF and goes on to describe some experimental and pioneering implementations of Factory Support Environments and their constituents Part III is devoted to the most complete implementation of an ESF Factory Support Environment to date Kernel 2r This Section provides a highly detailed discussion of both design and implementation issues In Part IV addresses what deployment strategies are now available to continue the spread of these ideas in order to meet the goal of better software based systems i e systems which are safer more economical to build more easily changed and more useful than those that have been built up to now Finally a Glossary of Terms and a list of References is given Readers those who have a professional interest in Information Technology
