nexus and management of uncertainty in water supply or connect well established strands in new ways including sections on water tools water price and value supply and demand privatization corporate responsibility and issues surrounding transboundary waters This volume conceives of water as a global issue and gathers a diverse group of leading scholars of water politics and policy

**Contemporary Water Governance in the Global South** Leila M. Harris, Jacqueline A. Goldin, Christopher Sneddon, 2015-03-24 The litany of alarming observations about water use and misuse is now familiar over a billion people without access to safe drinking water almost every major river dammed and diverted increasing conflicts over the delivery of water in urban areas continuing threats to water quality from agricultural inputs and industrial wastes and the increasing variability of climate including threats of severe droughts and flooding across locales and regions These issues present tremendous challenges for water governance This book focuses on three major concepts and approaches that have gained currency in policy and governance circles both globally and regionally scarcity and crisis marketization and privatization and participation It provides a historical and contextual overview of each of these ideas as they have emerged in global and regional policy and governance circles and pairs these with in depth case studies that examine manifestations and contestations of water governance internationally The book interrogates ideas of water crisis and scarcity in the context of bio physical political social and environmental landscapes to better understand how ideas and practices linked to scarcity and crisis take hold and become entrenched in policy and practice The book also investigates ideas of marketization and privatization increasingly prominent features of water governance throughout the global South with particular attention to the varied implementation and effects of these governance practices The final section of the volume analyzes participatory water governance querying the disconnects between global discourses and local realities particularly as they intersect with the other themes of interest to the volume Promoting a view of changing water governance that links across these themes and in relation to contemporary realities the book is invaluable for students researchers advocates and policy makers interested in water governance challenges facing the developing world

Water Security Bruce Lankford, Karen Bakker, Mark Zeitoun, Declan Conway, 2013-10-15 The purpose of this book is to present an overview of the latest research policy practitioner academic and international thinking on water security an issue that like water governance a few years ago has developed much policy awareness and momentum with a wide range of stakeholders As a concept it is open to multiple interpretations and the authors here set out the various approaches to the topic from different perspectives Key themes addressed include Water security as a foreign policy issue The interconnected variables of water food and human security Dimensions other than military and international relations concerns around water security Water security theory and methods tools and audits The book is loosely based on a masters level degree plus a short professional course on water security both given at the University of East Anglia delivered by international authorities on their subjects It should serve as an introductory textbook as well as be of value to professionals NGOs and policy makers

**Integrated Groundwater**

**Management** Anthony J Jakeman, Olivier Barreteau, Randall J Hunt, Jean-Daniel Rinaudo, Andrew Ross, 2016-08-05 The aim of this book is to document for the first time the dimensions and requirements of effective integrated groundwater management IGM Groundwater management is a formidable challenge one that remains one of humanity's foremost priorities It has become a largely non renewable resource that is overexploited in many parts of the world In the 21st century the issue moves from how to simply obtain the water we need to how we manage it sustainably for future generations future economies and future ecosystems The focus then becomes one of understanding the drivers and current state of the groundwater resource and restoring equilibrium to at risk aquifers Many interrelated dimensions however come to bear when trying to manage groundwater effectively An integrated approach to groundwater necessarily involves many factors beyond the aquifer itself such as surface water water use water quality and ecohydrology Moreover the science by itself can only define the fundamental bounds of what is possible effective IGM must also engage the wider community of stakeholders to develop and support policy and other socioeconomic tools needed to realize effective IGM In order to demonstrate IGM this book covers theory and principles embracing 1 an overview of the dimensions and requirements of groundwater management from an international perspective 2 the scale of groundwater issues internationally and its links with other sectors principally energy and climate change 3 groundwater governance with regard to principles instruments and institutions available for IGM 4 biophysical constraints and the capacity and role of hydroecological and hydrogeological science including water quality concerns and 5 necessary tools including models data infrastructures decision support systems and the management of uncertainty Examples of effective and failed IGM are given Throughout the importance of the socioeconomic context that connects all effective IGM is emphasized Taken as a whole this work relates the many facets of effective IGM from the catchment to global perspective *Global Challenges in Water Governance* Jeremy J. Schmidt, Nathaniel Matthews, 2017-07-24 This book presents a historically situated explanation of the rise of global water governance and the contemporary challenges that global water governance seeks to address It is particularly concerned with connecting what are often technical issues in water management with the social and political structures that affect how technical and scientific advice affects decisions Schmidt and Matthews are careful to avoid the pitfalls of setting up opposing binaries such as nature versus culture or private versus public thereby allowing readers to understand how contests over water governance have been shaped over time and why they will continue to be so Co written by an academic and a practitioner *Global Challenges in Water Governance* combines the dual concerns for both analytical clarity and practical applicability in a way that is particularly valuable both for educators researchers decision makers and newcomers to the complexities of water use decisions *Water for Food Security, Nutrition and Social Justice* Lyla Mehta, Theib Oweis, Claudia Ringler, Barbara Schreiner, Shiney Varghese, 2019-09-19 This book is the first comprehensive effort to bring together Water Food Security and Nutrition FSN in a way that goes beyond the traditional focus on irrigated agriculture Apart from looking

at the role of water and sanitation for human well being it proposes alternative and more locally appropriate ways to address complex water management and governance challenges from the local to global levels against a backdrop of growing uncertainties The authors challenge mainstream supply oriented and neo Malthusian visions that argue for the need to increase the land area under irrigation in order to feed the world s growing population Instead they argue for a reframing of the debate concerning production processes waste food consumption and dietary patterns whilst proposing alternative strategies to improve water and land productivity putting the interests of marginalized and disenfranchized groups upfront The book highlights how accessing water for FSN can be challenging for small holders vulnerable and marginalized women and men and how water allocation systems and reform processes can negatively affect local people s informal rights The book argues for the need to improve policy coherence across water land and food and is original in making a case for strengthening the relationship between the human rights to water and food especially for marginalized women and men It will be of great interest to practitioners students and researchers working on water and food issues
