Science Experiments 2 BPI, Science Experiments is a well organized series which compiles interesting experiments that help children understand basic science principles clearly Each book consists of 101 experiments that are divided into different categories The experiments make use of easily available apparatus and materials so that children can carry them out at home or in school laboratories The easy to follow steps and detailed illustrations make it simple for young scientists to perform the experiments

Spatial Sound Bosun Xie, 2022-10-17 Spatial sound is an enhanced and immersive set of audio techniques which provides sound in three dimensional virtual space This comprehensive handbook sets out the basic principles and methods with a representative group of applications sound field and spatial hearing principles and analytic methods of various spatial sound systems including two channel stereophonic sound and multichannel horizontal and spatial surround sound ambisonics wavefield synthesis binaural playback and virtual auditory display recording and synthesis and storage and transmission of spatial sound signals and objective and subjective evaluation Applications range from cinemas to small mobile devices The only book to review spatial sound principles and applications extensively Covers the whole field of spatial sound The book suits researchers graduate students and specialist engineers in acoustics audio and signal processing

Psychological Experiments on the Internet Michael H. Birnbaum, 2000-04-18 Until recently most psychological research was conducted

using subject samples in close proximity to the investigators namely university undergraduates In recent years however it has become possible to test people from all over the world by placing experiments on the internet The number of people using the internet for this purpose is likely to become the main venue for subject pools in coming years As such learning about experiments on the internet will be of vital interest to all research psychologists Psychological Experiments on the Internet is divided into three sections Section I discusses the history of web experimentation as well as the advantages disadvantages and validity of web based psychological research Section II discusses examples of web based experiments on individual differences and cross cultural studies Section III provides readers with the necessary information and techniques for utilizing the internet in their own research designs Innovative topic that will capture the imagination of many readers Includes examples of actual web based experiments

Experiment and Natural Philosophy in Seventeenth-Century

Tuscany Luciano Boschiero, 2007-09-04 The aim of this book is to explore and understand the activities undertaken by the Florentine Accademia del Cimento one of Europe's first scientific societies The Cimento operated for ten years between 1657 and 1667 and during that time performed many experiments and observations in physics and astronomy rivalling the achievements of the Royal Society of London and the Parisian Académie Royale des Sciences This book will attempt to sift through the available primary evidence as well as secondary accounts of the Cimento's activities in order to examine the intellectual concerns that the individual academicians acquired throughout their careers and that they pursued while carrying out and interpreting their experiments for the Cimento and the Tuscan Court Those interests will also shed some light on the ways in which the academicians performed and used experiments Inspired by Galileo's success with experiments and instruments during the first half of the seventeenth century the Cimento academicians developed an experimentalist approach to their natural inquiry that attempted to eliminate any dependence on theoretical presuppositions and preconceptions The group's purported aim was to rely solely on the senses to accumulate knowledge of nature This experimental philosophy framed the way in which historians have since viewed the Cimento's practices
