Sound Of Voices:

Voices in Revolution John A. Crespi, 2009-07-29 China's century of revolutionary change has been heard as much as seen and nowhere is this more evident than in an auditory history of the modern Chinese poem. From Lu Xun's seminal writings on literature to a recitation renaissance in urban centers today, poetics meets politics in the sounding voice of poetry. Supported throughout by vivid narration and accessible analysis, *Voices in Revolution* offers a literary history of modern China that makes the case for the importance of the auditory dimension of poetry in national revolutionary and postsocialist culture. Crespi brings the past to life by first examining the ideological changes to poetic voice during China's early twentieth-century transition from empire to nation. He then traces the emergence of the spoken poem from the May Fourth period to the present, including its mobilization during the Anti-Japanese War, its incorporation into the student protest repertoire during China's civil war, its role as a conflicted voice of Mao-era revolutionary passion, and finally its current adaptation to the cultural life of China's party-guided market economy. *Voices in Revolution* alters the way we read by moving poems off the page and into the real time and space of literary activity. To all readers, it offers an accessible yet conceptually fresh and often dramatic narration of China's modern literary experience. Specialists will appreciate the book's inclusion of noncanonical texts as well as its innovative interdisciplinary approach.

Voice as Art Richard Couzins, 2022-04-28 *Voice as Art* considers how artists have used human voices since they became reproducible and entered art discourse in the twentieth century. The discussion embeds artworks using voices within historical and theoretical contexts in a comparative overview, arguing that reproduction caused increased creativity, moving from acting to creating phonic materials framed by phenomenological deep listening, by early video and performance to the plurality and sampling of postmodernism, and the multiple angles of contemporary forensic listening. This change is an example of how artistic practice reveals the ideologies of listening. Using a range of examples from Hugo Ball, Martha Rosler, Vito Acconci, Bruce Nauman, Janet Cardiff, and Mike Kelley through to contemporary practice by Shilpa Gupta, The Otolith Group, and Elizabeth Price, the voice is tracked through modernism and postmodernism to posthumanism in relation to speaking subjects, sculptural objects, documents, dramaturgical utterance, forensic evidence, verbatim techniques, and embodied listening. This book gives artists, researchers, and art audiences ways to understand how voices exist in between theoretical discourses and how, with their utterances, artists create new dispositions in space by reworking genres to critique cultural form and meaning. This book will be of great interest to students and practitioners of sound art, visual culture, and theatre and performance.

[Training Actors' Voices](#) Tara McAllister-Viel, 2018-08-06 Contemporary actor training in the US and UK has become increasingly multicultural and multilingual. Border crossing, cross-cultural exchange in contemporary theatre practices, and the rise of the intercultural actor has meant that actor training today has been shaped by multiple modes of training and differing worldviews. How might mainstream Anglo-American voice training for actors address the needs of students who bring multiple worldviews into the

Sensing Sound Nina Sun Eidsheim, 2015-11-19 In *Sensing Sound* Nina Sun Eidsheim offers a vibrational theory of music that radically re-envisions how we think about sound music and listening Eidsheim shows how sound music and listening are dynamic and contextually dependent rather than being fixed knowable and constant She uses twenty-first century operas by Juliana Snapper Meredith Monk Christopher Cerrone and Alba Triana as case studies to challenge

common assumptions about sound such as air being the default medium through which it travels and to demonstrate the importance a performance's location and reception play in its contingency. By theorizing the voice as an object of knowledge and rejecting the notion of an a priori definition of sound, Eidsheim releases the voice from a constraining set of fixed concepts and meanings. In Eidsheim's theory, music consists of aural, tactile, spatial, physical, material, and vibrational sensations. This expanded definition of music as manifested through material and personal relations suggests that we are all connected to each other in and through sound. *Sensing Sound* will appeal to readers interested in sound studies, new musicology, contemporary opera, and performance studies.

VOICE Norie Neumark, Ross Gibson, Theo Van Leeuwen, 2023-12-05. Perspectives on the voice and technology from discussions of voice mail and podcasts to reflections on dance and sound poetry. Voice has returned to both theoretical and artistic agendas. In the digital era, techniques and technologies of voice have provoked insistent questioning of the distinction between the human voice and the voice of the machine, between genuine and synthetic affect, between the uniqueness of an individual voice and the social and cultural forces that shape it. This volume offers interdisciplinary perspectives on these topics from history, philosophy, cultural theory, film, dance, poetry, media arts, and computer games. Many chapters demonstrate Lewis Mumford's idea of the cultural preparation that precedes technological innovation: that socially important new technologies are foreshadowed in philosophy, the arts, and everyday pastimes. Chapters cover such technologies as voice mail, podcasting, and digital approximations of the human voice. A number of authors explore the performance performativity and authenticity or authenticity effect of voice in dance, poetry, film, and media arts, while others examine more immaterial concerns: the voice's often invoked magical powers, the ghostliness of disembodied voices, and posthuman vocalization. The chapters evoke an often paradoxical reassertion of the human in the use of voice in mainstream media, including recorded music, films, and computer games.
