Schwartz, 2015-01-18 A panoramic social history of hurricanes in the Caribbean The diverse cultures of the Caribbean have been shaped as much by hurricanes as they have by diplomacy commerce or the legacy of colonial rule In this panoramic work of social history Stuart Schwartz examines how Caribbean societies have responded to the dangers of hurricanes and how these destructive storms have influenced the region's history from the rise of plantations to slavery and its abolition to migrations racial conflict and war Taking readers from the voyages of Columbus to the devastation of Hurricane Katrina Schwartz looks at the ethical political

and economic challenges that hurricanes posed to the Caribbean's indigenous populations and the different European peoples who ventured to the New World to exploit its riches. He describes how the United States provided the model for responding to environmental threats when it emerged as a major power and began to exert its influence over the Caribbean in the nineteenth century and how the region's governments came to assume greater responsibilities for prevention and relief efforts that by the end of the twentieth century were being questioned by free market neoliberals. Schwartz sheds light on catastrophes like Katrina by framing them within a long and contentious history of human interaction with the natural world. Spanning more than five centuries and drawing on extensive archival research in Europe and the Americas, *Sea of Storms* emphasizes the continuing role of race, social inequality, and economic ideology in the shaping of our responses to natural disaster. Godforsaken Sea Derek Lundy, 2012-09-20 *Godforsaken Sea* is the hair-raising account of the world's most demanding, dangerous, and deadly sailing race. Around the world, one sailor, one boat, no stops, no assistance. Author Derek Lundy's vivid book follows the field of the 1996-1997 Vendée Globe through the race's grueling four-month circumnavigation of the globe, most of it through the terror of the Southern Ocean. Lundy narrates the race through the eyes and experiences of sixteen sailors, fourteen men and two women who embody the best and most eccentric aspects of our human condition. There's the gallant Brit who spends days beating back against the worst seas to save a fellow sailor, the Frenchman who bothers to salvage only a bottle of champagne from his broken and sinking boat, the sailor who comes to love the albatross that trails her for months, naming it Bernard, the sailor who calmly smokes a cigarette as his boat capsizes, and the Canadian who hours before he disappears forever dispatches this message: "If you drag things out too long here, you're sure to come to grief." With the literary touch of Saint-Exupéry and Conrad, Derek Lundy harnesses hurricane-force winds, six-story waves, icebergs, and deafening noise. And he lays bare the spirit of the men and women who push themselves to the outer limits of human endeavor, even if it means never returning home.

Ocean Storm Alert! Carrie Gleason, 2005. Over the oceans, no one is safe from the surging power of ocean storms. *Ocean Storm Alert* looks at how whirlpools, tidal waves, and tsunamis start and their effect on people at sea and in coastal areas.

CENAS Giuseppe Gambolati, 2012-12-06. The Upper Adriatic Sea basin comprises a very precarious coastal environment subject to continuous changes which prove appreciable not only over the geological scale but also in historical and modern times. According to some authors, the Venice Lagoon was formed 2000-3000 years ago, and other lagoons, e.g., the Grado Lagoon in the northernmost part of the Adriatic, are even more recent. In addition to lagoons, the Upper Adriatic coastal area includes salt and fresh water marshes and reclaimed land separated by several watercourses originating from the Alpine and Apennine ranges with a ground elevation not exceeding in many places 2 m above the mean sea level (msl). A significant fraction of this lowland is already now below msl because of natural and anthropogenic land subsidence, land reclamation, and

sea level rise occurred over the last century Natural land subsidence is still under way as a result of deep downward tectonic movement and consolidation of soils deposited in the most recent time Anthropogenic subsidence is primarily due to groundwater pumping for agricultural industrial civil and tourist use and to gas withdrawal from a large number of gas fields scattered through the Upper Adriatic basin and may still continue although at a reduced rate in the years to come At the same time msl is expected to rise in the next century due to global climate change mainly because of the greenhouse effect
