Design and Construction of Urban Stormwater Management Systems American Society of Civil Engineers,1993-01-01 Prepared by the Task Committee of the Urban Water Resources Research Council of ASCE Copublished by ASCE and the Water Environment Federation Design and Construction of Urban Stormwater Management Systems presents a comprehensive examination of the issues involved in engineering urban stormwater systems This Manual which updates relevant portions of Design and Construction of Sanitary and Storm Sewers MOP 37 reflects the many changes taking place in the field such as the use of microcomputers and the need to control the quality of runoff as well as the quantity Chapters are prepared by authors with experience and expertise in the particular subject area The Manual aids the practicing engineer by presenting a brief summary of currently accepted procedures relating to the following areas financial services regulations surveys and investigations design concepts and master planning hydrology and water quality storm drainage hydraulics and computer modeling

Urban Stormwater and Flood Management Veeriah Jegatheesan,Ashantha Goonetilleke,John van Leeuwen,Jaya Kandasamy,Doug Warner,Baden Myers,Muhammed Bhuiyan,Kevin Spence,Geoffrey Parker,2019-04-02 This book brings together the experiences of engineers and scientists from Australia and the United Kingdom providing the current status on the management of stormwater and flooding in urban areas and suggesting ways forward It forms a basis for the development of a framework for the implementation of integrated and optimised storm water management strategies and aims to mitigate the adverse impacts of the expanding urban water footprint Among other topics it also features management styles of stormwater and flooding and describes biodiversity and ecosystem services in relation to the management of stormwater and the mitigation of floods Furthermore it places an emphasis on sustainable storm water management measures Population growth urbanisation and climate change will pose significant challenges to engineers scientists medical practitioners policy makers and practitioners of several other disciplines If we consider environmental and water engineers they will have to face challenges in designing smart and efficient water systems which are robust and resilient to overcome shrinking green spaces increased urban heat islands damages to natural waterways due to flooding caused by increased stormwater flow This work provides valuable information for practitioners and students at both senior undergraduate and postgraduate levels

Stormwater Management for Transportation Facilities Shaw L. Yu,1993 This synthesis will be of interest to highway design engineers maintenance engineers environmental personnel administrators and others responsible for the design operation and maintenance of stormwater management for highways and ancillary facilities Information is presented on the basic hydrology

needed to assess stormwater impacts and on the effectiveness of stormwater management techniques Designers of highway facilities must consider stormwater management requirements within the context of both localized runoff impacts as well as downstream effects of runoff This report of the Transportation Research Board describes the management of both stormwater quantity and stormwater quality Stormwater quantity includes an overview of methods of estimating runoff and management control practices Stormwater quality management includes discussions of the most prevalent pollutants and best management practices BMP to minimize pollutants from transportation facilities Various types of structural and non structural methods are described including their design considerations and efficiencies Several stormwater management models are described with special concern for highway applications Highlights from the 1990 National Pollutant Discharge Elimination System NPDES permits are presented Rethinking Stormwater Management through Sustainable Urban Design Ali Cheshmehzangi, Maycon Sedrez, Andrew Flynn, 2024-08-31 This book provides a different narrative and approach to rethinking stormwater management through sustainable urban design It delves into design interventions and innovative strategies that lead to solving context specific issues of flooding water scarcity etc Starting with an overarching introduction and discussion on stormwater management research the book then primarily focuses on sustainable urban design practices strategies and policy guidelines By summarising a selection of successful global case study examples the book highlights how we should rethink stormwater management practices and policies from the design perspective Through sustainable urban design suggestions the book covers a wide range of conceptual examples to design and policy guidelines as well as best practices that could be utilised for other contexts The book is divided into two sections of 1 architectural and urban design practices and interventions and 2 policies and action plans This collection helps researchers and scholars rethink stormwater management and consider innovative and more importantly sustainable design strategies that could help develop new paradigms and policies for water related issues in cities and communities This will interest multiple stakeholders mainly urban policymakers planners urban designers urban specialists landscape architects architects and urban ecologists It could be treated as a case study based guide for governmental units dealing with water related issues in cities and urban areas
