Stone Age Africa Louis Seymour Bazett Leakey, 1936 **Human Beginnings in South Africa** H. J. Deacon, Janette Deacon, 1999 Specialists in Stone Age archaeology in South Africa present the results of nearly 150 years of research that follows the development of humans from their early beginnings to the late 19th century They offer evidence that the roots of South African society stretch back into the Stone Age Annotation copyrighted by Book News Inc Portland OR Stone Age Africa Louis Seymour Bazett Leakey, 1936 **Before Modern Humans** Grant S. McCall, 2020-09-10 This fascinating volume assessing Lower and Middle Pleistocene African prehistory argues that the onset of the Middle Stone Age marks the origins of landscape use patterns resembling those of modern human foragers Inaugurating a paradigm shift in our understanding of modern human behavior Grant McCall argues that this transition related to the origins of home base residential site use occurred in mosaic fashion over the course of hundreds of thousands of years He concludes by proposing a model of brain evolution driven by increasing subsistence diversity and intensity against the backdrop of larger populations and Pleistocene environmental unpredictability McCall argues that human brain size did not arise to support the complex patterns of social behavior that pervade our lives today but instead large human brains were co-opted for these purposes relatively late in prehistory accounting for the striking archaeological record of the Upper Pleistocene *Prehistoric Stone Tools of Eastern Africa* John J. The objective of this volume is to showcase the contemporary state of research on recognizing and evaluating the performance of stone age weapons from a variety of viewpoints, including investigating their cognitive and evolutionary significance. New archaeological finds and experimental studies have helped to bring this subject back to the forefront of human origins research. In the last few years, investigations have expanded beyond examining the tools themselves to include studies of damage caused by projectile weapons on animal and hominin bones and skeletal asymmetries in ancient hominin populations. Only recently has there been a growing interest in controlled and replicative experiments. Through this book, readers will be updated in the state of knowledge through a multidisciplinary scientific reconstruction of prehistoric weapon use and its implications. Contributions from expert authors are organized into three themed parts: recognizing weapon use, experimental and archaeological studies of impact traces, performance of weapon systems, factors influencing penetration depth, etc., and behavioral and evolutionary ramifications, cognitive and ecological effects of using different weapons.
