Stonehenge Mysteries Of The Stones And Landscape:

Stonehenge David Souden,1997 Endorsed by English Heritage experts this a uthoritative book uses the latest archaeological methods and discoveries to explain current knowledge on Stonehenge **Sutton Companion to the Folklore, Myths and Customs of Britain** Alexander Barrie,2005-11-24 Britain s rich and varied folklore legends and beliefs provide an insight into the island s history Every invader refugee or settler has helped contribute some new element or twist to the complex pattern of our national heritage This volume provides a comprehensive companion to legends and customs in England Scotland Wales and Ireland *The Mystery of Stone Circles* Paul Mason,2008 How was Stonehenge created Did circle builders use math to arrange the stones What happens on Midsummer Day Some things are so strange that they cannot be explained This series explains the connection between science and natural phenomena and how science can be used to try to explain mysteries **Exploring Megalithic Europe** Julian Heath,2019-11-07 Abundant prehistoric remains survive in the wide landscapes of Europe but none are arguably as fascinating or awe inspiring as the megalithic after the Greek megas great and lithos stone monuments built by the people who lived here during the three hugely important periods of European prehistory known respectively as the Neolithic the Copper Age and the Bronze Age These huge prehistoric stone structures can still be found scattered in their thousands across Europe and provide a tentative but evocative link to their builders and to Europe s distant past From the Mediterranean islands to the colder climes of Scandinavia Exploring Megalithic Europe takes readers to many European countries examining both famous and lesser known megalithic monuments and looking at what insights these remarkable reminders of prehistoric life may provide into the ancient communities responsible for their construction *Understanding Building Stones and Stone Buildings* John A. Hudson,John W. Cosgrove,2019-04-24 This book covers the wide spectrum of subjects relating to obtaining and using building stones starting with their geological origin and then describing the nature of granites volcanics limestones sandstones flint metamorphic stones breccias and conglomerates with emphasis being placed on how to recognise the different stones via the many illustrated examples from Great Britain and other countries The life of a building stone is explained from its origin in the quarry through its exposure to the elements when used for a building to its eventual deterioration The structure of stone buildings is then discussed with explanations of the mechanics of pillars lighthouses and walls arches bridges buttresses and roof vaults plus castles and cathedrals The sequence of the historical architectural styles of stone buildings is explained from the early days through to postmodern buildings Special attention is paid to two famous architects the Roman Vitruvius and the English Sir Christopher Wren who designed and supervised the construction of St Paul s Cathedral in London To demonstrate many of the concepts presented two exemplary stone buildings are described in detail the Albert Memorial in London and Durham Cathedral in northern England The former building is interesting because it is comprised of a cornucopia of different building stones and the latter building because of its architecture and sandstone

decay mechanisms In the final Chapter ruined stone buildings are discussed the many reasons for their decay and the possibility of their rebirth via digital recording of their geometry The book has over 350 pages and is illustrated with more than 450 diagrams and colour photographs of both the various stones and the associated stone buildings Readers knowledge of the subject will be greatly enhanced by these images and the related explanatory text A wide ranging references and bibliography section is also included
