 Gheena Un rabin credincios avertizeaza urgent Israelul rebel *Evolution of the Human Diet* Peter S. Ungar, 2007 We are  
 interested in the evolution of hominin diets for several reasons One is the fundamental concern over our present day eating  
 habits and the consequences of our societal choices such as obesity prevalent in some cultures and starvation in others  
 Another is that humans have learned to feed themselves in extremely varied environments and these adaptations which are  
 fundamentally different from those of our closest biological relatives have to have had historical roots of varying depth The  
 third and the reason why most paleoanthropologists are interested in this question is that a species trophic level and feeding  
 adaptations can have a strong effect on body size locomotion life history strategies geographic range habitat choice and  
 social behavior Diet is key to understanding the ecology and evolution of our distant ancestors and their kin the early  
 hominins A study of the range of foods eaten by our progenitors underscores just how unhealthy many of our diets are today  
 This volume brings together authorities from disparate fields to offer new insights into the diets of our ancestors  
 Paleontologists archaeologists primatologists nutritionists and other researchers all contribute pieces to the puzzle This  
 volume has at its core four main sections Reconstructed diets based on hominin fossils tooth size shape structure wear and  
 chemistry mandibular biomechanics Archaeological evidence of subsistence stone tools and modified bones Models of early  
 hominin diets based on the diets of living primates both human and non human paleoecology and energetics Nutritional  
 analyses and their implications for evolutionary medicine New techniques for gleaning information from fossil teeth bones  
 and stone tools new theories stemming from studies of paleoecology and new models coming from analogy with modern  
 humans and other primates all contribute to our understanding When these approaches are brought together they offer an  
 impressive glimpse into the lives of our distant ancestors The contributions in this volume explore the frontiers of our  
 knowledge in each of these disciplines as they address the knowns the unknowns and the unknowables of the evolution of  
 hominin diets Australian Books in Print 1999 K G Saur Books, 1999-04 Excellent coverage essential to worldwide
