At the core of this book is data derived from original previously unpublished research on brain size in a number of social mammals. This data supports the idea that evolution of the brain in humans is the result of social interaction. This book also traces the products of the social brain ideology: religion, urban life, housing, and learning and adapting to dense, complex social interactions. It uniquely compares brain evolution in social animals across the animal kingdom and examines the nature of the human brain and its evolution within the social and historical context of complex human social structures. **The Human**
