The Human Herpesviruses An Interdisciplinary Perspective:

The Human Herpesviruses, an Interdisciplinary Perspective André J. Nahmias, Walter R. Dowdle, Raymond F. Schinazi, 1981-01-01 Human Herpesviruses Ann Arvin, Gabriella Campadelli-Fiume, Edward Mocarski, Patrick S. Moore, Bernard Roizman, Richard Whitley, Koichi Yamanishi, 2007-08-16 This comprehensive account of the human herpesviruses provides an encyclopedic overview of their basic virology and clinical manifestations This group of viruses includes human simplex type 1 and 2 Epstein Barr virus Kaposi s Sarcoma associated herpesvirus cytomegalovirus HHV6A 6B and 7 and varicella zoster virus The viral diseases and cancers they cause are significant and often recurrent Their prevalence in the developed world accounts for a major burden of disease and as a result there is a great deal of research into the pathophysiology of infection and immunobiology Another important area covered within this volume concerns antiviral therapy and the development of vaccines All these aspects are covered in depth both scientifically and in terms of clinical guidelines for patient care The text is illustrated generously throughout and is fully referenced to the latest research and developments

The Herpesviruses Bernard Roizman, 2012-12-06 A great truth is a truth whose opposite is also a great truth Thomas Mann Essay on Freud 1937 This volume centers on pseudorabies PR V herpes simplex viruses 1 and 2 HSV 1 and HSV 2 and human cytomegalovirus CMV and fulfills three objectives The chapters on the epidemiology and latency of HSV and on the glycoproteins specified by HSV and CMV set the stage for the discussions of the immunobiology and pathogenesis of human herpesvirus infections in Volume 4 The epidemiology of HSV is the basis of our understanding of the spread and survival of this virus in the human populations Central to the epidemiology of HSV and its pathogenesis in humans is the ability of the virus to remain in a latent state for the life of its host The viral membrane glycoproteins are among the most interesting virion proteins primarily because of their critical role in the initiation of infection Since they are the surface membrane proteins of the virion and appear on the surface of productively infected cells they are also the obvious if not the exclusive targets of the immune response The chapters on the transforming potential of HSV and CMV and on the role of HSV in human cancer deal with challenging problems requiring rather different experimental tools

Immunology of Sexually Transmitted Diseases D.J. The Herpesviruses Carlos Lopez, Bernard Roizman, 2012-12-06 You damn sadist said mr cummings you try to make people think Ezra Pound Canto 89 What makes herpesviruses unique It is certainly not the size of their genomes or the individual features of their reproductive cycle although in toto striking features that are exclusive to the herpesviruses abound Unquestionably the pre eminent feature is the relationship of herpes viruses with their natural hosts As described in preceding volumes all herpesviruses seem to be able to colonize and to remain in a latent nonproductive form for life of their hosts Once

established in the host the relationship is best described as that of an armed truce What happens when this truce breaks down or when the host encounters the virus for the first time is the subject of this volume We have focused primarily on the five human herpesviruses herpes simplex virus 1 HSV 1 herpes simplex virus 2 HSV 2 cytomegalovirus CMV varicella zoster virus VZV and Epstein Barr virus EBV because much more is known about them than about any other herpesviruses and because it is of interest to compare both the diversity of manifestations of infections with human herpesviruses and the spectrum of human responses to these viruses This volume summarizes the current knowledge of the pathogenesis and immunobiology of herpesvirus infections in man and describes new and developing approaches to prophylaxis and treatment It contains contributions from distinguished research scientists presently engaged at the forefront of these scientific investigations

Immunology of Milk

and the Neonate Jiri Mestecky, Claudia Blair, Pearay L. Ogra, 2012-12-06 In the course of history humans have attempted to interrupt the physiological and psychological bond formed between a nursing mother and her child by substituting breastfeeding with artificial formulas A growing body of evidence indicates that breast milk quite apart from its unsurpassed nutritive value contains a large number of substances that protect the offspring from common infectious agents and allergens and promote the maturation of the gastrointestinal tract and the immune system In addition to well described milk antibodies and soluble mediators of innate immunity milk cells and pluripotent secreted factors cytokines are currently in the forefront of extensive research with respect to their importance in milk immunology The purpose of this conference was to critically evaluate the current state of our knowledge concerning the protective role of immune agents found in milk to provide up to date information of milk factors with respect to their role in the maturation of immunological defense systems in the neonate and to reassess the importance of breastfeeding in the prevention of allergies in formula fed infants We hope that the work presented by international participants will prompt many new ideas and stimulate further research in this important area This conference was sponsored primarily by the National Institute of Child Health and Human Development National Institutes of Health Bethesda MD We would like to thank Drs Sumner Yaffe and Delbert Dayton for their efforts with the organization planning and support of this conference
