Jopson,2011-12-07 Life just got easier because amidst the material world constructs that are now dissolving due to the lack of low dense energy to power them our higher vibrational energy is being utilized to create a whole new world in which to live Where we place our self in this restructuring is our own choice It is a choice we so easily make when we have all the information regarding the energy dynamics of creation itself we are a sovereign spiritual being and our acceptance brings that energy into our daily life so all that we hold dear to our heart becomes manifest With Human Energy Body Awareness you receive information that reflects you to you When we apply the question Is life living you or do you live life we open a portal to empowerment This will raise our Energy Body Vibration and allow us to free ourselves from the illusion that physical reality is somehow responsible for things that happen to us Documents from F. Human Physical Fitness and Activity Ann E. Caldwell,2016-03-29 The science of human physical activity and fitness is ripe for a novel theoretical framework that can integrate the ecological genetic physiological and psychological factors that influence physical activity in humans Physical inactivity dominates most developed nations around the world and is among the leading causes of disease burden and death worldwide Despite the wide array of physical and mental health benefits few people get the recommended level of physical activity to achieve these benefits Current research on physical activity has not as of yet been successful for the development of effective exercise interventions Several researchers have advocated a more integrative approach that takes evolutionary history into account but such a framework has yet to be advanced To that aim the first goal of this book is to present a comprehensive evolutionary and life history framework that highlights the domain specific aspects of the evolved psychology and physiology that can lead to a more integrated and complete understanding of physical activity across the lifespan It summarizes and extends previous work that has been done to understand the ways natural selection has shaped physical activity in humans in traditional and modern economies and environments In many ways humans are adapted to be physically active Overall however natural selection has shaped a flexible but energy conscious system that responds to environmental and individual costs and benefits of physical activity to optimally allocate a finite energetic budget across the lifespan This system is adapted to respond to cues of resource scarcity and high levels of obligatory physical activity and conserves energy to favor allocation in ways that increase the likelihood of reproductive success and survival This nuanced application leads to a more thorough understanding of the circumstances that natural selection is predicted to favor both sedentary and active behaviors in predictable ways across the lifespan The second goal of this book is to synthesize and interpret cross disciplinary research from biological and evolutionary anthropology and psychology epidemiology health psychology and exercise physiology that can illuminate original approaches to increase physical activity in modern primarily sedentary contexts This includes a breakdown of the human lifespan to discuss the predicted costs and benefits of physical activity at each stage of life in order

to differentiate the obstacles to physical activity and exercise that are functionally adaptive or were in the environments that they evolved and identifying which factors are more modifiable than others in order to develop interventions and environments that are more conducive to physical activity
