Stabilization Technologies for RCRA Corrective Actions ,1991 **Ground Water Handbook** Environmental Protection Agency, U.S.,1992-02 This comprehensive technical guide to assessing and monitoring ground water contamination contains more than 165 charts tables and illustrations and highlights such issues as using models to manage ground water protection programs restoring ground water investigating ground water quality sampling ground water tracing contaminants in the subsurface and monitoring well design and construction Unit Operations in Environmental Engineering Robert Noyes,1994-12-31 This book discusses the practical aspects of environmental technology organized into eight chapters relating to unit operations as follows 1 Biological Technology 2 Chemical Technology 3 Containment and Barrier Technology 4 Immobilization Technology 5 Membrane Technology 6 Physical Technology 7 Radiation and Electrical Technology 8 Thermal Destruction Technology Traditional technologies have been included as well as those that can be considered innovative and emerging The traditional approaches have been the most successful as contractors are careful about bidding on some of the newer technologies However as regulatory requirements increase markets will open for the innovative and emerging processes There will be increasing pressure to break down complex waste streams with each subsequent stream demanding separate treatment In addition a number of technologies have been developed by combining processes directly or in a treatment train and these developments are expected to assume increasing importance However such concerns as

uncertainties due to liability regulatory approval price competition and client approval have limited the application of some of these newer technologies

Foundation Engineering Handbook Hsai-Yang Fang, 2013-06-29 More than ten years have passed since the first edition was published During that period there have been a substantial number of changes in geotechnical engineering especially in the applications of foundation engineering As the world population increases more land is needed and many soil deposits previously deemed unsuitable for residential housing or other construction projects are now being used Such areas include problematic soil regions mining subsidence areas and sanitary landfills To overcome the problems associated with these natural or man made soil deposits new and improved methods of analysis design and implementation are needed in foundation construction As society develops and living standards rise tall buildings transportation facilities and industrial complexes are increasingly being built Because of the heavy design loads and the complicated environments the traditional design concepts construction materials methods and equipment also need improvement Further recent energy and material shortages have caused additional burdens on the engineering profession and brought about the need to seek alternative or cost saving methods for foundation design and construction

Developments in Geotechnical Engineering: from Harvard to New Delhi 1936-1994 A.S. Balasubramaniam,D.T.

Bergado,S.W. Hong,P. Nutalaya,N. Phien-Wej,2021-06-30 This book reviews the developments that have taken place in the field of geotechnical engineering since the first international conference on Soil Mechanics and Foundation Engineering was held in Harvard University in 1936 until the January 1994 conference in New Delhi India **Handbook, Ground Water:**

Ground water and contamination ,1990 **EPA-625/6** ,1985-10 **Handbook** ,1985 **Field Screening Europe**

Johannes Gottlieb,Heinz Hötzl,Karin Huck,Reinhard Niessner,2012-12-06 These Proceedings contain both oral and poster contributions to the first international conference Field Screening Europe Strategies and Techniques for On Site Investigation and Monitoring of Contaminated Soil Water and Air held in Karlsruhe September 29 October 1 1997

Environmental monitoring and the assessment of chemical contaminations are becoming more and more important The integrated study of environmental contamination in the field is a rather recent approach Field screening indicates such field analytical tools quick methods and strategies for on site or in situ environmental analysis and assessment of contamination The classical strategy for investigating contaminants consists of the following steps site studies sampling sample transport to the laboratory sample preparation and analysis This strategy is rather expensive and time consuming Some investigations including sample preparation may last several days In many cases the results must be available immediately and are of importance for further decisions Field screening is an alternative or complement to this strategy that attempts to be cheaper and faster and may achieve the same quality of results The most important argument for field analytical methods is that the superior accuracy and high costs of laboratory methods are disproportional to the possibility of artifacts from sampling and errors originating from spatial variations of contaminants
