Small Molecular Immunomodifiers of Microbial Origin, 1980 Small Molecular Immunomodifiers of Microbial Origin Hamao Umezawa, 2014-05-09 Small Molecular Immunomodifiers of Microbial Origin Fundamental and Clinical Studies of Bestatin focuses on the results of experimental and clinical studies suggesting that bestatin and small molecular weight immunity enhancing agents can contribute to the treatment of cancer and resistant infections The selection first offers information on the screening discoveries and genetics of microbial secondary metabolites and activity of bestatin Topics include the effect of bestatin on colony formation of murine bone marrow progenitor cells in vitro antitumor effect of bestatin on murine transplantable tumors and structures and properties of bestatin amastatin forphenicine and esterastin The text then examines the effects of bestatin on DNA and RNA metabolism in T cells and levamisole and bestatin in immunodeficient aged mice The text examines the influence of bestatin on the lymphoid system in humans natural killer activity and bone marrow The preliminary phase I study of bestatin in lung cancer cases and malignant skin tumors are discussed Topics include dosage schedule clinical findings and changes in immunological parameters The selection is a vital reference for readers interested in the applications of bestatin in the treatment of cancer and resistant infections

ImmunoPharmaceuticals Edward S. Kimball, 1995-11-27 Written by a leading researcher in immunology ImmunoPharmaceuticals specifically focuses on immunologically active drugs recently tested for clinical activity or recently approved for medical use Each chapter focuses on a single drug or class of drugs and discusses data from basic and preclinical research concerning mechanisms of action Preclinical models are compared with clinical findings to allow the reader to evaluate the predictive value of those models Featured drugs are being studied for therapy of cancer arthritic disease autoimmune disease immunodeficiency disease transplantation and determination of sepsis Overviews of the retinoids in cancer therapy and preclinical studies on flavonoids are featured *Natural Immunity, Cancer and Biological Response Modification* E. Lotzová, R. B. Hebermann, 1986-11-24 **Biochemistry of Peptide Antibiotics** Horst Kleinkauf, Hans von Döhren, 2019-07-22 No detailed description available for Biochemistry of Peptide Antibiotics

Screening for Biological Response Modifiers: Methods and Rationale James E. Talmadge, Isaiah J. Fidler, R.K. Oldham, 2012-12-06 The observation in the 1950s that nitrogen mustard and other toxic chemicals could induce antitumor responses in patients with refractory lymphoma initiated a massive search for active chemotherapeutic agents The initial observations stimulated a search for new chemotherapeutic agents which might have increased antitumor activity with less toxicity for normal tissues To aid in the search for these new chemicals and to attempt to distinguish among the many toxic chemicals which might be candidates for clinical studies the National Cancer Institute the pharmaceutical industry and the cancer research laboratories of most Western nations developed systems for screening drugs for antitumor activity Perhaps the most extensive screening program was established by the National Cancer Institute 1 This screening program has

evolved over the last two decades an evolution which has been repeatedly reviewed 2 5 Various screening programs in use have examined over 500 000 compounds as potential anticancer agents From these there are now approximately forty anticancer drugs in clinical use The utility of these compounds and their toxicities have been reviewed on many occasions It is now apparent that more active and less toxic anticancer drugs are needed It is also clear that the current screening programs are identifying compounds with similar levels of activity and with continuing moderate to severe toxicity 6

Aminopeptidases in Biology and Disease Nigel M. Hooper, Uwe Lendeckel, 2012-12-06 Aminopeptidases in Biology and Disease provides a comprehensive review of the emerging role of aminopeptidases in a range of biological processes and disease situations Processes as diverse as angiogenesis antigen presentation neuropeptide and hormone processing pregnancy and reproduction protein turnover memory inflammation tumour growth cancer and metastasis blood pressure and hypertension all critically involve one or more aminopeptidases The individual chapters have been written by experts in the field who have provided detailed accounts of the central roles played by various aminopeptidases in biology and disease

Gorin, Luc Douay, 2012-12-06 Experimental Hematology Today 1989 comprises selected papers presented at the 18th Annual Meeting of the International Society for Experimental Hematology July 16 20 1989 Paris France Four major areas of research are explored present aspects of stem cell transplantation control of hemopoiesis hemopoiesis in malignancies and gene transfer The role of autologous bone marrow transplantation in acute leukemia and in Hodgkin lymphoma properties of the murine interleukin 3 receptor effects of Ubenimex on proliferation and differentiation of human bone marrow cells and leukemic cell lines immune system

stimulation for the therapy of advanced stage neuroblastoma and retro viral gene transfer of human adenosine deaminase into hematopoietic cells are some of the topics considered BUCHH NDLERTEXT E Selected papers from the 18th Annual Meeting of the International Society for Experimental Hematology The proceedings are published annually and report on the latest experimental and clinical research *Structure-Activity Relationships of Anti-Tumour Agents* D.N. Reinhoudt, T.A. Connors, H.M. Pinedo, K.W. van de Poll, 2012-12-06 The Workshop series of the Koningin Wilhelmina Fonds is a feature of the interest of this Foundation to promote research and education in the field of cancer aiming to improve prognosis of the cancer patient For almost a century surgery has now been the main treatment modality for the cancer patient During the past 50 years radiation therapy has developed as a second important modality of treatment However neither of the two modalities are able to cure the majority of cancer patients as the disease is so often metastasized at presentation Cancer chemotherapy is a modality which does have the potential to cure patients with this advanced stage of disease In recent years the three modalities have been combined more and more and here is one of the reasons why the perspectives for the cancer patient have improved so much In addition certain types of cancers such as testicular carcinoma childhood tumors choriocarcinoma non Hodgkin lymphomas and others can now indeed often be cured by chemotherapy alone even if the disease is advanced The combination of drugs and the use of new drugs have greatly contributed to this development There are two main groups of new drugs analogs and new structures A great number of analogs of conventional structures have been developed during the past ten years A typical example of this group is adriamycin which is an analog of daunomycin

Ecto-peptidases Jürgen Langner, Siegfried Ansorge, 2012-12-06 The idea to compile recent results on the ectoenzymes aminopeptidase N CD13 and dipeptidylpeptidase IV CD26 arose from the great interest given by readers world wide to the two proceedings volumes edited by us in 1997 and 2000 Ansorge and Langner 1997 Langner and Ansorge 2000 These volumes contained the presentations at two symposia held in Magdeburg Germany in 1996 and 1999 under the title Cellular peptidases in immune functions and diseases which was also the name of the Sonderforschungsbereich in Magdeburg sponsored by the Deutsche Forschungsgemeinschaft between 1995 and 2001 Our groups in Magdeburg and Halle during the last two decades have provided results on these two enzymes in cells of the hematopoietic system that justify a review in an edited monograph like the present one see the reviews by Kahne et al 1999 Lendeckel et al 1999 Riemann et al 1999 There are however many other groups in Europe US and Japan which made important contributions to this field and particularly in topics improving the understanding of physiological and pathophysiological roles of APN CD13 and DPEP CD26 Therefore we decided to invite some of them to contribute reviews of their results to this book Having worked for about 40 years in the field of proteolysis for both of us to see the development of activities and knowledge from protein chemistry and enzymology to physiology and pathophysiology and even to therapy is very stimulating and fascinating Of course this development also reflects the dramatic improvement and refinement of methods NLM Newslines ,2000 **The Search for Bioactive**

Compounds from Microorganisms Satoshi Omura, 2012-12-06 Biologically active compounds isolated from microorganisms continue to be vital to the development of new drugs and agricultural chemicals This book was prepared by current and past members of the laboratory of Dr Satoshi Omura of the Kitasato Institute in Japan Dr Omura and his colleagues have discovered and studied a number of important antibiotics and in their work they have pioneered new methods for screening microbes for interesting and important compounds This book presents strategies and methods for identifying novel molecules with several types of biological activity In addition the book discusses the identification of microbial compounds of agrochemical importance presents information on chemical screening methods and concludes with chapters on microbial strain selection fermentation technology and genetic engineering of antibiotic producing microorganisms This book will be of great interest to scientists working in the very active and competitive fields of antibiotic and agrochemical discovery

The Herpesviruses Carlos Lopez, Bernard Roizman, 2012-12-06 You damn sadist said mr cummings you try to make people think Ezra Pound Canto 89 What makes herpesviruses unique It is certainly not the size of their genomes or the individual features of their reproductive cycle although in toto striking features that are exclusive to the herpesviruses abound Unquestionably the pre eminent feature is the relationship of herpes viruses with their natural hosts As described in preceding volumes all herpesviruses seem to be able to colonize and to remain in a latent nonproductive form for life of their hosts Once established in the host the relationship is best described as that of an armed truce What happens when this truce breaks down or when the host encounters the virus for the first time is the subject of this volume We have focused primarily on the five human herpesviruses herpes simplex virus 1 HSV 1 herpes simplex virus 2 HSV 2 cytomegalovirus CMV varicella zoster virus VZV and Epstein Barr virus EBV because much more is known about them than about any other herpesviruses and because it is of interest to compare both the diversity of manifestations of infections with human herpesviruses and the spectrum of human responses to these viruses This volume summarizes the current knowledge of the pathogenesis and immunobiology of herpesvirus infections in man and describes new and developing approaches to prophylaxis and treatment It contains contributions from distinguished research scientists presently engaged at the forefront of these scientific investigations
