Geothermal, Wind and Solar Energy Applications in Agriculture and Aquaculture Jochen Bundschuh,Guangnan Chen,D. Chandrasekharam,Janusz Piechocki,2017-08-02 The agri food chain consumes about one third of the world s energy production with about 12% of it for crop production and nearly 80% for processing distribution retail preparation and cooking The agri food chain also accounts for 80 90% of total global freshwater use where 70% alone is for irrigation Additionally on a global scale freshwater production consumes nearly 15% of the entire

energy production It can therefore be argued that making agriculture and the agri food supply chain independent from fossil fuel use has a huge potential to contribute to global food security and climate protection not only for the next decades but also for the coming century Provision of secure accessible and environmentally sustainable supplies of water energy and food must thus be a priority One of the major objectives of the world s scientists farmers decisions makers and industrialists is to overcome the present dependence on fossil fuels in the agro food sector This dependency increases the volatility of food prices and affects economic access to sustenance This book provides a critical review of recent developments in solar wind and geothermal energy applications in agriculture and the agro food sector such as processing distribution retail preparation and cooking

Fundamentals of Environmental Studies Mahua Basu,Xavier Savarimuthu, SJ,2017-11-08 Fundamentals of Environmental Studies is taught as a compulsory paper to first year undergraduate students across major technical universities in India This book introduces the fundamental principles and concepts of environmental science ecology and related interdisciplinary subjects such as policy law pollution control economics and natural resource management It covers a wide range of topics and issues including biodiversity global warming acid rain ozone layer depletion nuclear accidents nuclear holocaust disaster management manipulation of various natural resources including water land forests food and mineral resources and the problems associated with natural resource management It also analyzes different types of ecosystems biochemical cycles and laws of thermodynamics and provides easy to understand examples In addition the book offers separate chapters on various types of environmental pollution and waste management including waste water treatment solid waste management and green management
