F. Hickling, 1974 Farming Fish for the Future Brian Halweil, 2008 A different sort of salmon From ornamental ponds to industrial aquaculture Reducing fish to produce fish Fish farming for restoration A shift in mindset Toward sustainable aquaculture standards Handbook on European Fish Farming Ergün Demir, 2020-01-16 Aquaculture is one of the fastest way to produce animal protein for growing population in the World Aquaculture is the art science and business of producing aquatic plants and animals useful to humans Fish farming is an ancient practice and date back as far as 2500 BC In Europe fish raised in ponds became a common source of food during the Middle Ages Today aquaculture plays a major role in global fish supply Today the global community faces financial and economic crisis climatic changes and the pressing food and nutrition needs of a growing

population with finite natural resources As the world's population continues to increase over the coming decades and global living standards rise demand for fish is set to keep on growing With most wild capture fisheries already fully exploited much of that new demand will have to be met from aquaculture According to FAO estimates more than 50 % of all fish for human consumption now comes from aquaculture Aquaculture is one of the most resource efficient ways to produce protein Fish come out well because in general they convert more of the feed they eat into body mass than livestock animals Salmon is the most feed intensive farmed fish to convert feed to body weight gain and protein followed by chicken Aquaculture is the controlled cultivation and harvest of aquatic organisms Most commonly grown are finfish and shellfish but other aquatic organisms are also cultivated such as seaweed microalgae frogs turtles alligators and endangered species There are many similarities between aquaculture and agriculture but there are some important differences as well Aquaculture like agriculture is necessary to meet the food demands of a growing global population with diminishing natural fisheries stocks Aquaculture and agriculture are both farming However aquaculture is farming in the water and therefore requires a different set of knowledge skill and technology

Commercial Fish Farming Balfour Hephner, Yoel Pruginin, 1981-09-30 Brings together modern management methods and current practices for increasing fish yields and profits in commercial fish farms Based on extensive research and fish farming experience in Israel the authors outline how to select a site plan a farm and construct a pond They also cover biological and economical principles for efficient management

World Fish Farming: Cultivation and Economics E. Brown, 2012-12-06 Until the First Edition of *World Fish Farming Cultivation and Economics* was published several years ago there was little or no economic and technical information on commercial aquaculture either by countries or by species I tried at that time to partially fill the gap in the literature In this Second Edition I have updated data originally presented and increased the scope by adding new countries New trout data have been added for 10 western European countries sections on cost of production of food sized catfish and fingerlings in the USA new and improved chapters for Japan Hungary Indonesia the Philippines and the United Kingdom and completely new chapters pertaining to Poland Thailand and Czechoslovakia have all been added to this edition The book now includes 31 countries including all major producing ones Between 5.5 and 6.0 million metric tons of finfish shrimp and crayfish cultured production are represented which accounts for about 90% of the world's total The People's Republic of China and the USSR as well as countries on the continents of Europe Asia North America and Oceania are represented Because of only minimal reported cultured fish production in Africa and South America these continents have been omitted Also according to information received from New Zealand there is no culturing of fish in that country other than for restocking of public waters More than 100 species of cultured fish seven species of shrimp and prawns and six species of crayfish are discussed

Integrated Livestock-fish Farming Systems David Little, Peter Edwards, Food and Agriculture Organization of the United Nations, 2003-01-01 Integrated farming in Asia is either considered an eco friendly good that should be preserved for

environmental reasons or a poor practice that will soon be superseded by industrial aquaculture This report finds that most livestock fish integration is sound business conducted by entrepreneurs accessing urban markets where the price of fish is relatively low It can be used as part of a strategy to reduce environmental impacts of intensive livestock production and to produce low cost food Farmers have proved adept at both developing their systems to meet their own needs and diversifying the role of ponds fish and livestock within their complex livelihoods **Producing Fish** Barbara A.
