Biomass Burning in South and Southeast Asia Krishna Prasad Vadrevu, Toshimasa Ohara, Christopher Justice, 2021-06-23

Biomass burning is one of the most important sources of greenhouse gas emissions and aerosols in South and Southeast Asia and greatly impacts other countries through transboundary air pollution. With contributions from leading scientists, this volume offers an interdisciplinary perspective on the impacts of biomass burning on the land resources, climate, and the atmosphere. It showcases several examples linking top-down remote sensing, bottom-up ground-based measurements, and an integrated modeling to address the impacts of biomass burning and land-atmosphere interactions. It is a valuable guide for readers in atmospheric science, ecology, spatial geography, remote sensing, and GIS. This book is unique as it highlights the sources and the causes of biomass burning and atmospheric research in South and Southeast Asia. It explains the latest tools and techniques, in particular the use of satellite remote sensing and geospatial technologies for fire mapping, monitoring, and land cover/land use change. It focuses on large spatial scales, integrating top-down and bottom-up methodologies. It addresses the pressing issues of air pollution rampant in South and Southeast Asia. It includes contributions from global experts working on biomass burning projects in the USA, Japan, South/Southeast Asia, and Europe. The contents of this book will appeal to students and professionals using remote sensing and geospatial techniques, including geographers, ecologists, atmospheric and environmental scientists, and all who are interested in biomass burning pollution. **Land-Atmospheric**

Research Applications in South and Southeast Asia Krishna Prasad Vadrevu, Toshimasa Ohara, Chris Justice, 2018-03-26
This edited volume sheds new light on the impact of rapid Land Use Cover Changes (LUCC) on greenhouse gases (GHGs) and aerosol emissions in South and Southeast Asia. Several countries in South/Southeast Asia have the highest population growth rates in the world, which is the main cause for LUCC. Conversion of dense forests to agricultural areas and then to residential and urban areas is most commonly observed in South/Southeast Asian countries, with a significant release of GHGs and aerosols. The book showcases several case studies on the use of remote sensing and geospatial technologies to quantify biomass burning and air pollution impacts, aerosol pollution, LUCC, and impacts on ecosystem services. The book also includes articles on regional initiatives in research capacity building and training. The authors of this book are international experts in the field, and their contributions highlight significant drivers and impacts of air pollution in South/Southeast Asia. Readers will discover the latest tools and techniques, in particular the use of satellite remote sensing and geospatial technologies for quantifying GHGs, aerosols, and pollution episodes in this region. **Vegetation Fires and Pollution in Asia** Krishna

Prasad Vadrevu, Toshimasa Ohara, Chris Justice, 2023-05-30
Vegetation fires are prevalent in several regions of the world, including South/Southeast Asia. Fire occurrence and spread are influenced by fuel type, topography, climate, weather, and lightning, among others. In S/SEA, human-initiated fires are responsible for most of the incidents, in addition to natural factors. Through biomass burning, vegetation fires can emit large quantities of greenhouse gases and air pollutants such as

CO₂ CO NO_x CH₄ non methane hydrocarbons and other chemical species including aerosols that can affect air quality and health at both local and regional scales Moreover biomass burning pollutants can travel long distances and impact regional climate Therefore quantifying vegetation fires and their impacts is critical at different spatial scales This book includes contributions from renowned researchers from the USA and South Southeast Asia on various fire related topics The contributions resulted from several international meetings and workshops organized in Asia as part of the South Southeast Asia Research Initiative SARI under the NASA Land Cover Land Use Change Program The book is divided into three sections each containing multiple contributions a Mapping Monitoring and Modeling of Vegetation Fires b Greenhouse Gas Emissions and Air Pollution and c Air Pollution Modeling and Decision Support Systems These sections are preceded by an introductory chapter by the editors that highlights the latest satellite derived fire statistics and the current fire situation in S SEA This book will be a valuable resource for remote sensing scientists geographers ecologists atmospheric climate environmental scientists including policymakers and all who wish to advance their knowledge on vegetation fires and emissions in South Southeast Asia

Biochar Production Engineering Arpita Roy,Rouf Ahmad Bhat,Gowhar Hamid Dar,2025-08-02 Biochar Production Engineering Innovative Technology for Environmental Decontamination covers biochar production from different materials The book discusses comprehensively the compatibility of biochar for cleaning up contamination from different environments In addition the book also reconnoiters various eco friendly economical and aesthetically acceptable biochar based decontamination technologies The book alluringly highlights the cutting edge investigation in this field and provides intriguing data on the biochar application for the treatment of various kinds of pollutants to restore the ecosystem features and consequently reveal newfangled scopes of biochar application Key Features Provides various methods and strategies for biochar production from different raw materials and their physicochemical properties Investigation in relation to compatibility of biochar as pollution decontamination tool Address current trends and challenges related to the biochar production and economic aspects of biochar and its use in pollution remediation

Handbook of Air Quality and Climate Change Hajime Akimoto,Hiroshi Tanimoto,2023-09-27 This handbook covers the air quality air pollution from the viewpoints of causing impacts on human ecosystem health and climate change Traditionally air pollution has been a concern mainly in terms of its impacts on human health and it is still an immediate public and governmental concern in most Asian countries However in recent years so called extreme weather events such as stronger tropical cyclones flooding drought and other phenomena have been manifested causing tremendous losses of human lives and properties Importantly climate models tell us that such extreme weather events are actually induced by anthropogenic global warming It has been pointed out that mitigation or alleviation of such climate change leading to the extreme weather events in the next 30 years can be possible only by reducing air pollutants with positive radiative forcing such as ozone or methane which are called short lived climate pollutants SLCPs Here concerns about mitigation of air pollutants from the points of human health and climate change have

merged This book covers different kinds of air pollutants and radiative forcers and how they can be measured It also mentions the situation of air pollutants in different continents and their regional impacts to human health environment and economy as well as their link to extreme weather events The book presents how the air pollution and climate change can be mitigated and how clean air technologies and international initiatives for co controlling air pollution and climate change have been developed
