The Flow of Matter and Energy Through the Biosphere L. Reed Brantley, Foundational Approaches in Science Teaching, University of Hawaii. Curriculum Research and Development Group, 1978

The Paradigm of Forests and the Survival of the Fittest Sergio A. Molina-Murillo, Carlos Rojas Alvarado, 2016-03-30 This book demonstrates the social historical and environmental framework within which humans have developed a relationship with the forest and its resources Starting from the biological basis that permits the existence of forests to the use of forest resources in a modern human context this book summarizes the interaction between humans and forest ecosystems Designed for readers from a broad range of disciplines and interests including those from environmental sciences environmental economics sociology anthropology biology forestry and human ecology and other related disciplines the book evokes interest in the development of an integrated approach towards forest ecosystems and natural resources in the context of sustainability

Evolution of Matter and Energy on a Cosmic and Planetary Scale M. Taube, 2012-12-06 My intention in this book is to describe in simple language using a minimum of mathematics but a maximum of numerical values the most important developments of science dealing with matter and energy on cosmic and global scales In the conventional literature all of these findings are distributed among books and journals on physics astronomy chemistry geology biology energy engineering and the environmental sciences The main purpose here is to attempt to give a unified description of Nature from the elementary particles to the Universe as a whole This is used as a basis for analysing the future development of mankind The future evolution of the Universe galaxies stars and planets gives some hope for the destiny of mankind The problem of matter and energy flow on the Earth appears soluble even for the distant future There seems to be no reason why a long period of human development on this planet should not be possible The book has been prepared based on my lectures at the Warsaw University from 1959 to 1968 and during the 15 years 1969 1983 at the Swiss Federal Institute of Technology Eidgenossische Technische Hochschule in Zurich and at the University of Zurich I wish to give my sincere thanks to the Swiss Federal Institute for Reactor Research at Wurenlingen for their constant support I am especially grateful to Mrs Christine Stratton for setting up the English text and to Mr R W Stratton and LG McKinley for their helpful criticisms and remarks
