Phillips, Jeri A. Sechzer, 2012-12-06 This volume grew out of a project to conduct a survey of the scientific literature of the United States for items addressing the ethical and humane issues of animal experimentation The original purpose of the survey was to provide packground information for the development of a set of guide lines for the use of animals in research then in preparation by The New York Academy of Sciences Ad Hoc Committee on Animal Research We soon realized however that the survey constituted a valuable resource in its own right In this book we present the results of the literature survey along with relevant information about its legislative and historical con text We hope that this material will be helpful to biomedical researchers grappling with animal welfare problems as well as to social scientists interested in tracing the evolution of the 20th century phase of the animal research controversy The time span covered by the survey was selected to match the 20 year period between the passage of the first federal Animal Welfare Act in 1966 and the most recent legislation regulating animal research which took effect during 1986 Our analysis examines this transitional period through the pages of the scientific literature During these 2 decades animal re search in the United States was transformed Activist animal protection organizations catapulted troublesome ethical questions to national prom inence throwing the scientific community² into turmoil **The Use of Animals in Medical Research and Testing** United States. Bibliography of Reports by the National Academy of Sciences, 1945-1985 ,1986 **The Ethics of Psychological Research** J. D. Keehn,2013-10-22 The Ethics of Psychological Research contains expanded versions of original presentations reported in a two day symposium on Ethics in Psychological Research held at Atkinson College York University near Toronto in September 1980 The book is organized into three major sections wherein the first deals with ethical principles and regulations the second with ethics of research with special populations and the third with problems associated with applications of scientific knowledge A concluding section then details the results of a psychological research method applied to the question of a psychological ethic **Genetics and the Law II** Milunsky,2013-11-11 The law is a mandate and a mirror it both commands and reflects It should not come as a shock that scientists and physicians often prefer the mirror at times when society seems to be demanding a mandate This may be especially true in the rapidly advancing field of medical genetics where recent discoveries leading to potentially startling applications have raised old questions of law in a new light Nevertheless we believe that in general the conflict between the law and science as illustrated in the field of genetics is embroiled with exaggeration The Chief Justice of the United States Supreme Court Warren Burger has noted that the prime function of the law is to protect basic human values individual human values sometimes even at the expense of scientific progress and that it is not the function of the law to keep pace with science While both of these statements are true as far as they go we believe the law must make an affirmative effort to anticipate scientific developments so that those beneficial to society can be nurtured rather than stultified It was to nurture cooperation and understanding that we brought together a distinguished faculty of internationally known experts on law and genetics to discuss their fields in 1975
