Anatomy of Victory John D. Caldwell, 2018-11-09 This groundbreaking book provides the first systematic comparison of America's modern wars and why they were won or lost John D Caldwell uses the World War II victory as the historical benchmark for evaluating the success and failure of later conflicts Unlike WWII the Korean Vietnam and Iraqi Wars were limited but they required enormous national commitments produced no lasting victories

and generated bitter political controversies Caldwell comprehensively examines these four wars through the lens of a strategic architecture to explain how and why their outcomes were so dramatically different He defines a strategic architecture as an interlinked set of continually evolving policies strategies and operations by which combatant states work toward a desired end Policy defines the high level goals a nation seeks to achieve once it initiates a conflict or finds itself drawn into one Policy makers direct a broad course of action and strive to control the initiative When they make decisions they have to respond to unforeseen conditions to guide and determine future decisions Effective leaders are skilled at organizing constituencies they need to succeed and communicating to them convincingly Strategy means employing whatever resources are available to achieve policy goals in situations that are dynamic as conflicts change quickly over time Operations are the actions that occur when politicians soldiers and diplomats execute plans A strategic architecture Caldwell argues is thus not a static blueprint but a dynamic vision of how a state can succeed or fail in a conflict **The Gamble**
