Neuropsychology Gerald Goldstein, Paul David Nussbaum, Sue R. Beers, 2013-06-29 In this volume of the series Human Brain Function Assessment and Rehabilitation we cover the area of how brain function is assessed with behavioral or neuropsychological instruments These assessments are typically conducted by clinical neuropsychologists or behavioral neurologists and so we made an effort to present the somewhat differing approaches to these two related disciplines Clinical neuropsychologists are psychologists who typically utilize standardized tests while behavioral neurologists are physicians who generally assess brain function as part of the clinical neurological evaluation Both approaches have much to offer The basic assumption of neuropsychological assessment is that the brain is the organ of behavior and therefore the condition of

the brain may be evaluated with behavioral measures Neuropsychological tests are those measures found by research to be particularly sensitive to alterations in brain function An adequate neuropsychological test is a procedure that can be related to some objective measure of alteration in brain function Over the years these objective measures have changed but generally involve documentation through direct observation of brain tissue or through histological pathological neuroimaging or other laboratory procedures The methods described in the first two volumes of this series describe the neuroimaging procedures that are often used in the validation of neuropsychological tests *Traumatic Brain Injury* Mark J.

Assessment Amir M. Poreh,2012-12-06 Since the late 1800s psychologists have been interested in discerning the strategies subjects employ to solve psychological tests Piaget 1928 Werner 1940 Gesell 1941 Much of this work however has relied on qualitative observations In the 1970s Edith Kaplan adopted this approach to the analysis of standardized neuropsychological measures Unlike her predecessors Dr Kaplan and her colleagues emphasized the application of modern behavioral neurology to the analysis of the test data Her approach was later termed the Boston Process Approach to neuropsychological assessment While Edith Kaplan's work generates a great deal of enthusiasm the qualitative nature of her analyses did not allow for its adoption by mainstream neuropsychologists However in recent years this limitation has begun to be addressed

Clinicians and researchers have developed new methodologies for quantifying the Boston Process Approach leading to the emergence of a new field which is collectively termed the Quantified Process Approach. Quantified Process Approach to Neuropsychological Assessment outlines the rationale for the emergence of this new approach and reviews the state of the art research literature and up to date clinical applications as they pertain to the evaluation of neuropsychiatric head injured and learning disabled patients. When available norms and scoring forms are included in the appendices.

Neuropsychological Interpretation of Objective Psychological Tests Charles J. Golden, Patricia Espe-Pfeifer, Jana Wachsler-Felder, 2006-04-11 The inter comparison of specific skills as represented by performance on neuropsychological tests is at the heart of the neuropsychological assessment process. However there is a

tendency to regard the interpretation of single tests as a process that is independent of performance on other tests with integration of test information representing a summary of these individual test performances As neuropsychology has become increasingly sophisticated it has been recognized that many factors influence the performance on any given test The meaning of the same score may vary considerably from one person to another depending on his or her performance on other neuropsychological tests Thus a low score on the Halstead Category Test may indeed reflect frontal lobe damage but only if we first rule out the influence of visual spatial problems emotionality attentional issues motivation fatigue and comprehension of the instructions Simplistic interpretations that assume a common interpretation based on a specific score will invariably lead to errors in interpretation and conclusions The purpose of this book is to provide each test that is described with a compendium of the possible interpretations that can be used with a variety of common tests that are often included in a neuropsychological test battery The first chapter discusses some of the pitfalls and cautions when comparing the tests while the second chapter examines administrative and scoring issues that may be unclear or unavailable for a given test

The Scientific Foundation of Neuropsychological Assessment Elbert Russell, 2011-12-12 Neuropsychology is a specialized branch of psychology which focuses on the relationship between the brain and human functions including cognition behaviour and

emotion With an emphasis on a scientific approach which includes analysing quantitative data neuropsychology follows an information processing approach to brain activity using standard assessments to evaluate various mental functions This book examines the standardized battery of tests in neuropsychology with a particular focus on forensic applications of these tests suggesting that a united theory of assessment needs to be established Bringing together multiple articles related to forensic neuropsychology this book offers an exploration of the neurological and psychometric theoretical basis for standardized batteries as well as a comparison between flexible and standardized batteries Ultimately it is argued that a standardized battery of tests need to be used and explains the justification for the reliability of this approach especially in relation to expert witness testimony While doing this formal procedures including advanced mathematical procedures such as formulas and decision tree algorithms are presented to be utilized in assessments With its thorough examination of the theoretical and practical applications of a standardized battery in neuropsychological assessment this book will prove helpful to clinical practitioners and attorneys using assessment for their cases Provides a unified theoretical basis for a standardized neuropsychological assessment battery Shows the justification for using neuropsychological assessment in forensic applications Offers practical examples which can be used to create a standardized assessment battery

Ethical Issues in Clinical Neuropsychology Shane Bush, Michael Drexler, 2002-01-01 Until now there has been no single volume in which a broad and comprehensive scope of ethical questions in neuropsychology is discussed These editors have sought to fill that gap calling upon leading thinkers in the field of neuropsychology and ethics Ethical Issues in Clinical Neuropsychology affords the seasoned practitioner as well as the beginner a broad sampling of research and commentary on the ethical dilemmas involved in the clinical practice of Neuropsychology Part 1 presents ethical issues that arise in the provision of neuropsychological services irrespective of setting whereas Part 2 concentrates on the unique ethical challenges that attend practice with specific populations Each chapter offers a rare view into the actual practice of Neuropsychology and the examples highlight an oft quoted observation at Ethics Committee meetings that good clinical practice is good ethical practice Carefully crafted vignettes allow the reader to apply these concepts to a myriad of situations confronting practicing clinical neuropsychologists The discerning reader of Ethical Issues in Clinical Neuropsychology should have no difficulty translating between the 1992 and the proposed ethics code This is a volume that will be a meaningful addition not only to the libraries of graduate students interns and postdoctoral fellows but also to the reference shelves of established practitioners and those preparing for board certification examinations in neuropsychology This book will be of interest to neuropsychologists rehabilitation psychologists clinical psychologists and ethicists
