The end of the neck wire, which is protruding through the top of the head, may be cut off now or later. The wires sticking from the sides of the body were inserted during the wrapping process to help hold the wings in place and to keep the string from slipping. These wires are pulled out later. Artificial eyes of the proper size and color may be set in place now.

15 The finished mount. When the specimen is completely dry, restore the color to any fleshy parts with paint or stain.
