## **Taxonomy And Phylogenetics Of The Coenosus Group Of Hister Linnaeus Coleoptera:**

The Taxonomy and Phylogenetics of the Coenosus Group of Hister Linnaeus Michael S. Caterino, 1999-05-11 The coenosus group containing 34 species is the most speciose clade of Histerini in the Americas The author provides the first comprehensive revision of these species including keys for identification complete distributional data illustrations of diagnostic characters and a detailed phylogenetic analysis He uses the phylogeny to examine the evolution of several biological characteristics with particular emphasis on myrmecophily

**The Taxonomy and Phylogenetics of the Coenosus Group of Hister Linnaeus (Coleoptera: Histeridae)** E. Gorton Linsley, Michael Stephen Caterino, Raina L. Takumi, 1926 *Coleoptera, Beetles. Morphology and Systematics* Rolf G. Beutel, Richard A.B. Leschen, 2016-03-21 This book is a revised edition of the first of three volumes in the Handbook of Zoology series which treats the systematics and biology of Coleoptera With over 380 000 described species Coleoptera are by far the most species rich order of insects and the largest group of animals of comparable geological age Moreover numerous species are tremendously important economically The beetle volumes meet the demand of modern biologists seeking to answer questions about Coleoptera phylogeny evolution and ecology This first Coleoptera volume covers the suborders Archostemata Myxophaga and Adephaga and the basal series of Polyphaga with information on world distribution biology morphology of all life stages phylogeny and comments on taxonomy

**A Taxonomic Revision and Phylogenetic Analysis of the Ant Genus Gnamptogenys Roger in Southeast Asia and Australasia (Hymenoptera: Formicidae: Ponerinae)** John E. Lattke, 2004-11-04 Ants belonging to the genus Gnamptogenys are important and diverse predators in the forests of the tropics of the Americas Southeast Asia and Australasia The recent rapid accumulation of these ants in collections rendered the last revision obsolete raising the number of known species from about 80 to over a 120 species worldwide The present study recognizes 49 Old World species almost half of them new distributed among 5 species groups They are present in many entomological collections as the large size of some species and their conspicuousness has caught the attention of even general collectors They figure increasingly in studies of diversity and ecology due to aspects of their biology such as predatory specialization or their reproduction which includes proper queens in some species and worker reproduction in other species While most species are ground nesters in forests some are arboreal and others are subterranean This revision covers all the Old World species and proposes phylogenetic relations among the different species groups The identification of the species is possible with aid of well illustrated keys for workers and queens The results of working with the keys can be rapidly confirmed by consulting the diagnosis that accompanies each species account or the full description if need be The phylogenetic analysis uses a valuable series of internal morphological characters previously unconsidered in ant systematics Detailed distribution data is also

included for each species This work will be valuable for those studying insect diversity and ecology of forests in Southeast Asia and Australasia Their diverse biology and relative large size of many species make these ants attractive subjects for comparative studies and this reference should open the door for further studies *The Taxonomy and Phylogeny of New World Histerini (Coleoptera: Histeridae)* Michael S. Caterino, 1998 *Systematics and Phylogeny of Sparganothina and Related Taxa (Lepidoptera: Tortricidae: Sparganothini)* Bernard Landry, Jerry A. Powell, 2001-08-15 This work provides a hypothesis of evolutionary relationships within the Neotropical genus Sparganothina and between this genus and other lineages of Sparganothini Lepidoptera Tortricidae Nineteen species are considered to belong to Sparganothina Ten additional species are placed in Sparganothina and five in Coelostathma pending a better phylogenetic understanding of Coelostathma and related genera Thirty species are described as new **Australian Beetles Volume 2** Adam Slipinski, John Lawrence, 2019-11-01 This three volume series represents a comprehensive treatment of the beetles of Australia a relatively under studied fauna that includes many unusual and unique lineages found nowhere else on Earth Volume 2 contains 36 chapters providing critical information and identification keys to the genera of the Australian beetle families included in suborders Archostemata Myxophaga Adephaga and several groups of Polyphaga Scirtoidea Hydrophiloidea Scarabaeoidea Buprestoidea and Tenebrionidae Each chapter is richly illustrated in black and white drawings and photographs The book also includes colour habitus figures for about 1000 Australian beetle genera and subgenera belonging to the families treated in this volume This volume is a truly international collaborative effort as the chapters have been written by 23 contributors from Australia China Czech Republic Germany Italy Poland and USA
