Taxonomy And Plant Conservation:

Taxonomy and Plant Conservation Etelka Leadlay, Stephen L. Jury, 2006-01-19 This book illustrates the key role played by taxonomy in the conservation and sustainable utilisation of plant biodiversity It is a tribute to the work of Professor Vernon Heywood who has done so much to highlight the importance of sound scholarship training and collaboration for plant conservation Divided into four parts the book opens with an overview of the place of taxonomy in science and in implementing the Convention on Biological Diversity Part 2 outlines the theoretical basis of taxonomy how it is done and how it contributes to measuring diversity The third part explains how taxonomy is used to establish conservation priorities and actions and the concluding part illustrates taxonomy in the practice and measurement of effective conservation action With contributions from taxonomists and also the users of taxonomy the volume will provide a balanced treatment suitable for advanced students researchers and conservation professionals

Plant Biosystematics William F. Grant, 2013-09-25 Plant Biosystematics is a compendium of papers from a symposium titled Plant Biosystematics Forty Years Later held in Montreal in July 1983 This collection reviews the current

field of biosystematics particularly the evolution of natural biota and how plant biosystematics can contribute to the welfare of humans One paper reviews biosystematics compares new approaches and discusses the latest trend in comparative molecular evolution of genes One author discusses the cytology and biosystematics concerning the discontinuities and genetic independence occurring in the evolutionary process Another author discusses chromosome pairing in species and hybrids that includes models of chromosome pairing in diploids The text also describes chromosome banding and biosystematics as well as the problems of chromosome banding that should be addressed to in future research With estimates of the number of species being threatened with extinction numbering around 20 000 one paper address the issue of conservation and biosystematics The author suggests that more biological information should be published to avoid duplication of effort and possibly drive scientists to have their views more widely felt Agriculturists botanists conservationists environmentalists and researchers in the field of botany conservation and plant genealogy will find this book valuable

Anthropogenic Pollution Arun Arya, Saikat Kumar Basu ,2016-07-01 The global environment has been going through significant challenges in recent times due to a number of factors such as industrial pollution expansion of agricultural land way beyond the fringe forest zones destruction of virgin forests loss of quality agricultural lands due to soil erosion loss of global wildlife and biodiversity climate change global warming devastating forest fires floods draughts melting of glaciers to mention only a handful The list could possibly go on and on with never ending items being added covering every aspect of modern human life But there is an important underlying hidden factor behind all these that we all need to identify and realize The most alarming fact about this hidden factor is that they are all directly or indirectly impacted by human activities in some way or other Human civilizations have reached great strides from the earliest days when men first discovered wheel or learnt the art of agriculture and crop and livestock breeding We have seen the age of computronics robotics and now moving into the age of biotechnology genetic engineering and nanotechnology Our science quests have stretched beyond the borders of the home planet and we have even started stretching hands in unlocking the secrets of distant members of our solar system This is indeed tremendous progress there could be no doubt about that But at the same time we also need to remember about the impending darkness too beneath the lamp that provides light to the rest of room While we are standing in gaining a lot but are we paying enough attention to what we are also loosing at the same time The loss of forested areas building up carbon dioxide in the global atmosphere pollution of both fresh and salt water via number of toxic chemicals both of inorganic and organic nature poor quality of the air we are breathing and the catastrophic loss of global biodiversity are these not a sign of regress instead of the so called and highly cherished progress towards a darker and destructive future Human or anthropogenic impacts are in turn devastating the planet with our attention being shifted only to the shining aspect of our civilizations There is indeed a darker side of every bright picture that is being placed in front of our glaring eyes There is no silver lining in every cloud that we see on the sky We are becoming seriously myopic and choosing to ignore

the deadly symptoms that are showing up in front of us every now and then as a result of our own activities Anthropogenic impacts have been devastating to our global ecosystems and are challenging our local environments in a significant manner As responsible global citizens we strongly believe that we need to voice our concerns to the incessant global environmental pollution happening at every instance at different corners of earth Hence is the humble effort of coming up with an international peer reviewed volume on Anthropogenic Pollution Causes and Concerns The current volume is a collection of a number of articles from scientists academics researchers journalists bureaucrats and technocrats from different parts of the world Each article talks about a separate story and highlights some specific problems caused by anthropogenic impact and resulting in detrimental forms of environmental pollution Each article is complete with its table graphs diagrams and bibliography to cater to a wide range of readers from serious academics researchers and students to environmental enthusiasts and general public interested in stretching their boundary of knowledge way beyond traditional education The volume will also be useful for both under graduate and post graduate students specializing in environmental science studies and also for the MPhil curriculum and entry level PhD courses at different academic institutes

Medicinal Plants and Environmental Challenges Mansour Ghorbanpour,Ajit Varma,2017-10-31 This book sheds new light on the role of various environmental factors in regulating the metabolic adaptation of medicinal and aromatic plants Many of the chapters present cutting edge findings on the contamination of medicinal plants through horizontal transfer as well as nanomaterials and the biosynthesis of pharmacologically active compounds In addition the book highlights the impacts of environmental factors e g high and low temperature climate change global warming UV irradiation intense sunlight and shade ozone carbon dioxide drought salinity nutrient deficiency agrochemicals waste heavy metals nanomaterials weeds pests and pathogen infections on medicinal and aromatic plants emphasizing secondary metabolisms In recent years interest has grown in the use of bioactive compounds from natural sources Medicinal and aromatic plants constitute an important part of the natural environment and agro ecosystems and contain a wealth of chemical compounds known as secondary metabolites and including alkaloids glycosides essential oils and other miscellaneous active substances These metabolites help plants cope with environmental and or external stimuli in a rapid reversible and ecologically meaningful manner Additionally environmental factors play a crucial role in regulating the metabolic yield of these biologically active molecules Understanding how medicinal plants respond to environmental perturbations and climate change could open new frontiers in plant production and in agriculture where successive innovation is urgently needed due to the looming challenges in connection with global food security and climate change Readers will discover a range of revealing perspectives and the latest research on this vital topic

Floral Diversity of Kachchh Arid Ecosystem: A Unique Insight into Xeric Plants Dr. Ekta B. Joshi,Dr. Hiren B. Soni,Dr. Pankaj N. Joshi, The book Floral Diversity of Kachchh Arid Ecosystem A Unique Insight into Xeric Plants focuses on biodiversity ecology and taxonomy of plant diversity of altitudinal hill gradient environment viz Kachchh Arid Ecosystem Western Gujarat India

with special emphasis on checklist of some rare endangered and threatened plants It encompasses the in depth information on occurrence and distribution of general vegetation species richness frequency density abundance commonness and rarity of important and significant plant species exist in the region The core theme of this book is floristic study and altitudinal diversity of hilly plants with special reference to species distribution population dynamics and community structure in addition to ethnobotany ethnomedicine and phytosociology The book embodies the vast and enormous information about ethnobotanical and ethnomedicinal plants used by tribal community of hilly habitats of Kachchh This book also highlights the phytosociological aspects of grass species along with historical account population structure dominance and dynamics It summarizes the unique records of some noteworthy plants in relation to status distribution age structure threats faced etc Besides the book is a good repository of field records of some native and endemic plants used by locales as medications or panacea for curing incorrigible ailments The special feature of this book is field monitoring assessment and evaluation of native plants using grass root techniques for survival sustenance revival restoration and rejuvenation of dwindling plant species of environmental ecological and economic importance of arid hill ecosystem
