Exploring Apocalyptica Frank Uekötter, 2018-08-11 Environmental alarmism has long been a political bellwether Tell me what you think about the green apocalypse and I ll tell you where you stand on the issues But as the environmental heydays of the 1970s move into perspective the time has come for a reassessment Horror scenarios create a legacy whose effects have largely escaped attention Based on case studies from four continents and the North Atlantic Exploring Apocalyptica argues for a reevaluation of familiar clichés It shows that environmentalists were less apocalyptic than commonly thought and other groups were far more enthusiastic It traces an interconnection with Cold War fears and economic depressions and demonstrates how alarmism faced limits in the Global South It also suggests that past horror

scenarios impose constraints on ongoing debates At a time when climate change turns from a scenario into an experienced reality this book charts paths for an age that may have already moved beyond the peak apocalypse

Security, the Environment and Emancipation Matt McDonald, 2012-01-30 This book offers an examination of the role of emancipation in the study and practice of security focusing on the issue of environmental change The end of the Cold War created a context in which traditional approaches to security could be systematically questioned This period also saw a concerted attempt in IR to argue that environmental change constituted a threat to security This book argues that such a notion is problematic as it suggests that a universal definition of security is possible which prevents a recognition of security as a site of contestation in which a range of actors articulate alternative visions of who or what is in need of being secured If security is understood and approached in traditional terms as the territorial preservation of the nation state from external threat then it is indeed difficult to see how environmental issues would benefit from being placed on states security agenda If however security is defined in terms of the emancipation of the most vulnerable individuals from contingent structural oppressions then drawing a relationship between environmental change and security may be beneficial for redressing those environmental issues and prioritising the needs of those most at risk from the manifestations of global environmental change This book takes the limitations of contemporary approaches to the relationship between the environment and security as its starting point and seeks to do two things First it aims to illustrate the ways in which arguments over approaches to environmental issues can be viewed as contestation over the meaning of security in particular political contexts Central here is the composition and assumptions of the dominant security discourse to emerge regarding those issues a framework of meaning for the most important forms of action on behalf of a particular group defining the terms for meaningful contestation and negotiation about security itself within that group As such the book attempts to illustrate the dynamics of competition over the meaning of security with reference to environmental issues particularly focusing on instances of political change in the dominant security discourse through which that issue is approached In the process the author points to the central role of these dominant security discourses in underpinning the most practically significant actions regarding environmental issues such as deforestation and global climate change The book employs methodological tools that enable a focus on how particular frameworks of meaning are constituted and become dominant how they provide a lens through which various issues are approached and how discourses most consistent with redressing environmental change and the suffering of the most vulnerable might come to provide the framework through which security is viewed in particular contexts This book will be of much interest to students of Critical Security Studies geography sociology IR and Political Science in general

African Rain Forest Ecology and Conservation William Weber, Lee J. T. White, Lisa Naughton-Treves, Amy Vedder, 2001-01-01 Extending from west Africa to Madagascar from the vast lowland Congo Basin to the archipelago of forest islands on its eastern rim the African rain forest is surpassed in size only by the Amazon This book sheds light on the current efforts to understand and conserve the African rain forest an area in need of urgent action to save its biological wealth cultural heritage and economic potential Written by conservation scientists and practitioners based in the African rain forest the book offers a multidisciplinary perspective that integrates many biological and social sciences Early chapters trace the forces from paleoecological factors to recent human actions that have shaped the African forest environment The next chapters discuss the dominant biological patterns of species ranging from the distinctive elephants gorillas and okapi to the less well known birds butterflies and amphibians Other chapters focus on how such different groups as hunter gatherers forest farmers bushmeat hunters recent immigrants and commercial foresters have used the forests Several authors stress the need for tighter links between research and conservation action The final section draws lessons from the collective experience of those working in an Africa wracked by political strife and economic hardship

environmental managers and practitioners especially those working for non profit organizations and government organizations tasked with finding ways to adapt to global environmental change Transformative Sustainable Development
Kei Otsuki, 2014-12-05 Recent debates about sustainable development have shifted their focus from fixing environmental problems in a technocratic and economic way to more fundamental changes in social political processes and relations In this context participation is a genuinely transformative approach to sustainable development yet the process by which participation leads to transformation is not sufficiently understood This book considers how the act of participating in sustainable development projects can bring about social transformation that is considered to be fair and just by the participants and non participants in a broader societal context Drawing on ideas from social theory and applied anthropology the book proposes a reflexivity based framework to analyse participation as a type of social action underpinned by primary experience Development projects have a transformative effect when participants are given the opportunity to reflect on their experience share the reflection with others and open new space for collective deliberation and change The book applies this framework to assess community based participatory projects in the Amazon African slums and rural settlements and disaster stricken areas in Japan It also outlines potential institutions of governance to institutionalize the change by referring to current food governance drawing out lessons with international relevance This book will be of interest to students of sustainable development environmental policy and development studies as well as practitioners and policy makers in these fields
