Listening To The Sea Robert Jay Wilder, 2010-06-15 Environmental politics and policy while gaining a significant place in the nation's consciousness constantly comes up against the United States desire for more development more profit and a collective lack of foresight Nowhere is this more evident than in the crucial biodiversity of the world's oceans which are victim to pollution overharvesting habitat destruction and simplistic and fragmented environmental policies that do not speak to underlying problems Robert Wilder describes how management of the world's oceans and their ecosystems has long faced two principal obstacles The first is the seemingly infinite capacity of human apathy something that permits us to take the sea's comfort sustenance ecological services and integrity for granted The second is the myriad lines for rigid offshore jurisdiction That people believe the diversity of life on land should be protected is reflected in well publicized efforts to save the celebrated biodiversity of rainforests Far less is known however about protecting a larger two thirds of this planet the oceans Drawing on academic literature and practical experience Wilder illustrates the nature of the questions facing decision makers and provides intelligent well crafted solutions By describing how the emerging idea of precautionary action can help build second generation policy Wilder offers means to halt problematic overfishing He integrates political science with the goals of environmental protection revealing why agencies often fail in their mission to preserve the environment and offers fresh sensible new paths ahead Wilder shows how damage to marine ecosystems often stems from distant land based activities and details emerging ideas such as how industrial ecology can be a cost effective

way to prevent pollution Through a rigorous integration of policy and science Wilder suggests a much improved second generation governance of the ocean and coasts and proposes new ideas for resolving the environmental policy stalemate found within the U S government

Benthic foraminifera as tools to reconstruct high-latitude Holocene climate variability and processes during cold-water coral mound growth and development Nina Forster, 2013-10-23 Cold water corals occur worldwide from high latitudes to tropical areas in various settings from the deep sea to shallow marine environments near the coast The topic of this thesis is the establishment and extension of knowledge about environmental conditions controlling cold water coral CWC mound development From literature it is known that glacial interglacial cycles drive development and geographic distribution of CWC mounds on a large scale On the other hand knowledge about the influence of small scale climatic and oceanographic changes during the Holocene is scarce Thus this thesis focuses on the investigation of the limited Holocene climatic and oceanographic changes and their effect on the process of mound genesis For this purpose a Holocene CWC mound setting in a sound in the Altafjord in northern Norway 70°N the Stjærnsund was chosen and the local benthic ecosystem was extensively analysed Von den sub arktischen hohen Breiten bis in warme tropische Zonen besiedeln Kaltwasserkorallen unseren Planeten Sie haben sich verschiedenste Lebensräume erschlossen Von der Tiefsee bis zu marinen Flachwassergebieten an der Küste kann ihr Vorkommen beobachtet werden Sie bilden faszinierende Ökosysteme die erst in den letzten Jahrzehnten intensiver erforscht wurden Diese Arbeit widmet sich der tieferen Erforschung dieser Lebensräume Im Fokus stehen dabei Umweltbedingungen die die Entwicklung der Kaltwasserkorallenvorkommen kontrollieren Umfangreiche frühere Untersuchungen haben bereits gezeigt dass ihr Wachstum

als auch ihre geographische Verbreitung im Wesentlichen von Glazial Interglazial Zyklen gesteuert werden Die kurzzeitlichen klimatischen und ozeanographischen Steuerungsfaktoren sind im Vergleich dazu jedoch nahezu unbekannt Daher konzentriert sich diese Arbeit auf die Erforschung von kurzzeitigen klimatischen und ozeanographischen Veränderungen die insbesondere im Holozän zu beobachten sind sowie deren mögliche Auswirkungen auf die Entwicklung von Kaltwasserkorallen Mounds Hierzu wurde der holozäne Kaltwasserkorallen Mound im Stjærnsund ein Sund im Altafjord in Nordnorwegen 70 N ausgewählt und dessen benthisches Ökosystem umfassend analysiert

Soil and Soul Alastair McIntosh, 2004-08-26 It is easy to feel helpless in the face of the torrent of information about environmental catastrophes taking place all over the world In this powerful and provocative book Scottish writer and campaigner Alastair McIntosh shows how it is still possible for individuals and communities to take on the might of corporate power and emerge victorious As a founder of the Isle of Eigg Trust McIntosh helped the beleaguered residents of Eigg to become the first Scottish community ever to clear their laird from his own estate And plans to turn a majestic Hebridean mountain into a superquarry were overturned after McIntosh persuaded a Native American warrior chief to visit the Isle of Harris and testify at the government inquiry This extraordinary book weaves together theology mythology economics ecology history poetics and politics as the author journeys towards a radical new philosophy of community spirit and place His daring and imaginative responses to the destruction of the natural world make *Soil and Soul* an uplifting inspirational and often richly humorous read
