The Family C. C. Harris, 2021-10-17 Originally published in 1969 this introduction to the social study of the family was designed both for students of sociology and for students of related subjects requiring familiarity with a similar approach It is therefore written in language as simple as possible technical terms are only introduced when indispensable and are always defined While the book is focused on European and American family systems the author believed these are intelligible only when placed in a wider context and so the first part is concerned with kinship marriage and the family in general He does not attempt to provide a descriptive account of all the empirical studies available but concentrates on what he considers the chief theoretical problems In consequence this book is argumentative and critical in approach and never strays far from the central issues of sociological theory it is therefore of value to both students of sociology and to others interested in the perspective which the discipline can give to the study of the family

Structure, Function, and Regulation of Molecules Involved in Leukocyte Adhesion Peter E. Lipsky, Robert Rothlein, Takashi K. Kishimoto, Ronald B. Faanes, C. Wayne Smith, 2012-12-06 Leukocyte adhesion molecules have been the subject of intense basic and preclinical research Results from clinical trials obtained so far with antibodies directed towards these surface proteins offer promise for the prevention of graft rejection and effective treatment of acute and chronic inflammatory disease This volume presents a comprehensive review of contemporary research on the structure function and regulation of leukocyte adhesion molecules and their ligands from the molecular to the clinical level The blend of basic science and clinical applications presented in *Structure Function and Regulation of Molecules Involved in Leukocyte Adhesion* provides clear evidence of the biological importance of cell cell interactions and the many potential clinical dividends afforded by understanding the molecular basis of cell adhesion It will appeal to a broad range of readers in immunology and cell biology

Structure and Function of the Extracellular Matrix Bela Suki,2021-11-27 Structure and Function of the Extracellular Matrix A Multiscale Quantitative Approach introduces biomechanics and biophysics with applications to understand the biological function of the extracellular matrix in health and disease A general multiscale approach is followed by investigating behavior from the scale of single molecules through fibrils and fibers to tissues of various organ systems Through mathematical models and structural information quantitative

description of the extracellular matrix function is derived with tissue specific details The book introduces the properties and organization of extracellular matrix components and quantitative models of the matrix and guides the reader through predicting functional properties This book integrates evolutionary biology with multiscale structure to quantitatively understand the function of the extracellular matrix This approach allows a fresh look into normal functioning as well as the pathological alterations of the extracellular matrix Professor Suki's book is written to be useful to undergraduates graduate students and researchers interested in the quantitative aspects of the extracellular matrix Researchers working in mechanotransduction respiratory and cardiovascular mechanics and multiscale biomechanics of tendon cartilage skin and bone may also be interested in this book Examines the evolutionary origins and consequences of the extracellular matrix Delivers the first book to quantitatively treat the extracellular matrix as a multiscale system Presents problems and a set of computational laboratory projects in various chapters to aid teaching and learning Provides an introduction to the properties and organization of the extracellular matrix components

Systems Science and Cybernetics - Volume III Francisco Parra-Luna, The subject Systems sciences and cybernetics is the outcome of the convergence of a number of trends in a larger current of thought devoted to the growing complexity of primarily social objects and arising in response to the need for globalized treatment of such objects This has been magnified by the proliferation and publication of all manner of quantitative scientific data on such objects advances in the theories on their inter relations the enormous computational capacity provided by IT hardware and software and the critical revisiting of subject object interaction not to mention the urgent need to control the efficiency of complex systems where efficiency is understood to mean the ability to find a solution to many social problems including those posed on a planetary scale The result has been the forging of a new academically consolidated scientific trend going by the name of Systems Theory and Cybernetics with a comprehensive multi disciplinary focus and therefore apt for understanding realities still regarded to be inescapably chaotic This subject entry is subdivided into four sections The first an introduction to systemic theories addresses the historic development of the most commonly used systemic approaches from new concepts such as the so called geometry of thinking or the systemic treatment of non systemic identities to the taxonomic entropic axiological and ethical problems deriving from a general systemic cybernetic conceit Hence the focus in this section is on the historic and philosophical aspects of the subject Moreover it may be asserted today that beyond a shadow of a doubt problems in particular problems deriving from human interaction but in general any problem regardless of its nature must be posed from a systemic perspective for otherwise the obstacles to their solution are insurmountable Reaching such a perspective requires taking at least the following well known steps a statement of the problem from the determinant variables or phenomena b adoption of theoretical models showing the interrelationships among such variables c use of the maximum amount of

wherever possible quantitative information available on each placement of the set of variables in an environment that inevitably pre determines the problem That epistemology would explain the substantial development of the systemic cybernetic approach in recent decades The articles in the second section deal in particular with the different methodological approaches developed when confronting real problems from issues that affect humanity as a whole to minor but specific questions arising in human organizations Certain sub themes are discussed by the various authors always from a didactic vantage including problem discovery and diagnosis and development of the respective critical theory the design of ad hoc strategies and methodologies the implementation of both qualitative soft system methodologies and formal and quantitative such as the General System Problem Solver or the axiological operational perspective approaches cross disciplinary integration and suitable methods for broaching psychological cultural and socio political dynamisms The third section is devoted to cybernetics in the present dual meaning of the term on the one hand control of the effectiveness of communication and actions and on the other the processes of self production of knowledge through reflection and the relationship between the observing subject and the observed object when the latter is also observer and the former observed Known as second order cybernetics this provides an avenue for rethinking the validity of knowledge such as for instance when viewed through what is known as bipolar feedback processes through which interactions create novelty complexity and diversity Finally the fourth section centres around artificial and computational intelligence addressing sub themes such as neural networks the simulated annealing that ranges from statistical thermodynamics to combinatorial problem solving such as in the explanation of the role of adaptive systems or when discussing the relationship between biological and computational intelligence
