## Workshop Statement of Task

**Toward a Common Research Agenda in Infection-Associated Chronic Illnesses:  
A Workshop to Examine Common, Overlapping Clinical and Biological Factors**

**June 29–30, 2023 | Washington, D.C.**

A planning committee of the National Academies of Sciences, Engineering, and Medicine will organize and conduct a public workshop to explore the current understanding of, and future research opportunities for, infection-associated chronic illnesses. The workshop will focus on long COVID, myalgic encephalomyelitis/chronic fatigue syndrome, persistent Lyme disease, and multiple sclerosis. Workshop discussions will consider the latest research and knowledge gaps in the following:

1. Overlapping clinical and biological factors underlying infection-associated chronic illnesses,
2. Current practice and novel technologies to develop urgently needed diagnostic tests for different stages of illness and/or the potential underlying infectious agent,
3. Identification of therapeutic targets and strategies to prevent or impede chronic illness progression, and

Owen, Fillia Makedon, 2013-04-17 Multimedia is changing the design of database and information retrieval systems The accumulation of audio image and video content is of little use in these systems if the content cannot be retrieved on demand a critical requirement that has led to the development of new technologies for the analysis and indexing of media data In turn these technologies seek to derive information or features from a data type that can facilitate rapid retrieval efficient compression and logical presentation of the data Significant work that has not been addressed however is the benefits of analyzing more than one data type simultaneously Computed Synchronization for Multimedia Applications presents a new framework for the simultaneous analysis of multiple media data objects The primary benefit of this analysis is computed synchronization a temporal and spatial alignment of multiple media objects Computed Synchronization for Multimedia Applications also presents several specific applications and a general structure for the solution of computed synchronization problems The applications demonstrate the use of this structure Two applications in particular are described in detail the alignment of text to speech audio and the alignment of simultaneous English language translations of ancient texts Many additional applications are discussed as future uses of the technology Computed Synchronization for Multimedia Applications is useful to researchers students and developers seeking to apply computed synchronization in many fields It is also suitable as a reference for a graduate level course in multimedia data retrieval     **Proceedings of the ... the authority of an individual or an organization in the physical world The authority can be established for example cryptographically A mobile agent can travel from one place to another subject to the destination place's approval The source and destination places can be in the same computer or in different computers In either case the agent initiates the trip by executing a go instruction which takes as an argument the name or address of the destination place The next instruction in the agent's program is executed in the destination place rather than in the source place Thus in a sense the mobile agent paradigm reduces networking to a program instruction A mobile agent can interact programmatically with the places it visits and if the other agents approve with the other agents it encounters in those places
