A revision of the shore-fly genus Hydrochasma Hendel (Diptera, Ephydriidae) Wayne N. Mathis, Tadeusz Zatwarnicki, 2013-12-16 This revision comprehensively documents species of the shore fly genus *Hydrochasma* Hendel which is one of three genera of the shore fly tribe Discocerini subfamily Gymnomyzinae that occurs exclusively in the New World The other two genera are *Pectinifer* Cresson and *Facitrichophora* Mathis Zatwarnicki All known species of *Hydrochasma* are described with an emphasis on structures of the male terminalia which are fully described and illustrated In addition detailed locality data and distribution maps for all species are provided Among New World genera of Discocerini *Hydrochasma* is perhaps the least well known as indicated by the dramatic increase in recognized species reported in this revision Before this revision *Hydrochasma* included just seven species and herein we more than quadruple that number by adding 27 previously undescribed species These additions bring the total number of congeners to 34 Much of this increase has resulted from a greatly improved sampling of the New World fauna documenting the ongoing need for field work and better taxon sampling of the earth s shore fly fauna With clarification of species how they can be recognized and where they occur we hope that additional research on immature stages and other aspects of their natural history and ecology will be fostered and facilitated

Entomology Cedric Gillot,2013-03-14 The idea of writing this book was conceived when in the late 1960s I began teaching a senior undergraduate class in general entomology I soon realized that there was no suitable text for the class I intended to give The so called general or introductory texts reflected the traditional taxonomic approach to entomology and contained relatively little information on the physiology and ecology of insects This does not mean that there were no books containing such information There were several but these were so specialized and

de tailed that their use in an introductory class was limited I hold a strong belief that an undergraduate general entomology course should provide a balanced treatment of the subject Thus although some time should be devoted to taxonomy including identification best done in the laboratory using primarily material which students themselves have collected supplemented with specimens from the general collection appropriate time should be given also to discussion of the evolution development physiology and ecology of insects In the latter category I include the interactions between insects and Man because it is important to stress that these interactions follow normal ecological principles Naturally the format of this book reflects this belief The book has been arranged in four sections each of which necessarily overlaps with the others *Encyclopedia of Entomology* John L. Capinera, 2008-08-11 This text brings together fundamental information on insect taxa morphology ecology behavior physiology and genetics Close relatives of insects such as spiders and mites are included
