Crossing Textual Boundaries in International Children's Literature Lance Weldy, 2011-01-18 As the first part of the title indicates my interest in looking at intertextuality and

transformation still maintains a prominent place throughout this book as well. If we believe that no text is an island then we will understand that the relationships between and within texts across the years become a fascinating place for academic inquiry. I included the word boundaries into the title because we never get tired of voicing our opinions about texts which traverse relegated boundaries such as genre or medium. Not only am I interested in discussing what these changes across boundaries mean socially, historically and culturally but also what they mean geographically which accounts for the second part of my title. I am very excited that this book will be placing even more emphasis on children's literature in an international scene than my first book did in the sense that I have added more scholars on an international level. I hesitate to list the nationalities of all of the contributors here because quite a few have themselves crossed international boundaries in different ways by either studying abroad or finding permanent residency in foreign countries. Nevertheless the writers have lived extensively in or identify as being from Australia, Canada, England, Finland, Germany, Greece, Iceland, Ireland, Israel, Norway, Spain, Sweden, Turkey, the United States of America and Wales.

Introduction *Crosslinguistic Approaches to the Psychology of Language* Jiansheng Guo, Elena Lieven, Nancy Budwig, Susan Ervin-Tripp, Keiko Nakamura, Seyda Ozcaliskan, 2010-10-18

This volume covers state of the art research in the field of crosslinguistic approaches to the psychology of language. The forty chapters cover a wide range of topics that represent the many research interests of a pioneer, Dan Isaac Slobin, who has been a major intellectual and creative force in the field of child language development, linguistics and psycholinguistics for the past four decades. Slobin has insisted on a rigorous crosslinguistic approach in his attempt to identify universal developmental patterns in language learning to explore the effects of particular types of languages on psycholinguistic processes to determine the extent to which universals of language and language behavior are determined by modality: vocal auditory vs. manual visual and finally to investigate the relation between linguistic and cognitive processes. In this volume researchers take up the challenge of the differences between languages to forward research in four major areas with which Slobin has been concerned throughout his career: language learning in crosslinguistic perspective; spoken and sign languages; the integration of language specific factors in narrative skill; theoretical issues in typology, language development and language change and the relationship between language and cognition. All chapters are written by leading researchers currently working in these fields who are Slobin's colleagues, collaborators or former students in linguistics, psychology, anthropology and cognitive science. Each section starts with an introductory chapter that connects the themes of the chapters and reviews Slobin's contribution in the context of past research trends and future directions. The whole volume focuses squarely on the central argument: universals of human language and of its development are embodied and revealed in its diverse manifestations and utilization. *Crosslinguistic Approaches to the Study of Language* is a key resource for those interested in the range of differences between languages and how this impacts on learning, cognition and language change and a tribute to Dan Slobin's momentous contribution to
