The Fusion Of Hardware Design And Verification:

Correct Hardware Design and Verification Methods George J. Milne, Laurence Pierre, 1993-05-12 These proceedings contain the papers presented at the Advanced Research Working Conference on Correct Hardware Design Methodologies held in Arles France in May 1993 and organized by the ESPRIT Working Group 6018 CHARME 2 and the Universit de Provence Marseille in cooperation with IFIP Working Group 10.2 Formal verification is emerging as a plausible alternative to exhaustive simulation for establishing correct digital hardware designs The validation of functional and timing behavior is a major bottleneck in current VLSI design systems slowing the arrival of products in the marketplace with its associated increase in cost From being a predominantly academic area of study until a few years ago formal design and verification techniques are now beginning to migrate into industrial use As we are now witnessing an increase in activity in this area in both academia and industry the aim of this working conference was to bring together researchers and users from both communities

The Fusion of Hardware Design and Verification George J. Milne, 1988 *A Formal Approach to Hardware Design* Jørgen Staunstrup, 2012-12-06 A Formal Approach to Hardware Design discusses designing computations to be realised by application specific hardware It introduces a formal design approach based on a high level design language called Synchronized Transitions The models created using Synchronized Transitions enable the designer to perform different kinds of analysis and verification based on descriptions in a single language It is for example possible to use exactly the same design description both for mechanically supported verification and synthesis Synchronized Transitions is supported by a collection of public domain CAD tools These tools can be used with the book in presenting a course on the subject A Formal Approach to Hardware Design illustrates the benefits to be gained from adopting such techniques but it does so without assuming prior knowledge of formal design methods The book is thus not only an excellent reference it is also suitable for use by students and practitioners

Correct Hardware Design and Verification Methods, 1993 **Formal Hardware Verification** Thomas Kropf, 1997-08-27 This state of the art monograph presents a coherent survey of a variety of methods and systems for formal hardware verification It emphasizes the presentation of approaches that have matured into tools and systems usable for the actual verification of nontrivial circuits All in all the book is a representative and well structured survey on the success and future potential of formal methods in proving the correctness of circuits The various chapters describe the respective approaches supplying theoretical foundations as well as taking into account the application viewpoint By applying all methods and systems presented to the same set of IFIP WG10.5 hardware verification examples a valuable and fair analysis of the strenghts and weaknesses of the various approaches is given [Hardware/Software Co-Design](#) Jørgen Staunstrup, Wayne Wolf, 2013-04-17 Introduction to Hardware Software Co Design presents a number of issues of fundamental importance for the design of integrated hardware software products such as embedded communication and multimedia systems This book is a comprehensive introduction to the fundamentals of hardware software co design Co

design is still a new field but one which has substantially matured over the past few years This book written by leading international experts covers all the major topics including fundamental issues in co design hardware software co synthesis algorithms prototyping and emulation target architectures compiler techniques specification and verification system level specification Special chapters describe in detail several leading edge co design systems including Cosyma LYCOS and Cosmos Introduction to Hardware Software Co Design contains sufficient material for use by teachers and students in an advanced course of hardware software co design It also contains extensive explanation of the fundamental concepts of the subject and the necessary background to bring practitioners up to date on this increasingly important topic

Encyclopedia of Microcomputers Allen Kent, James G. Williams, 1997-05-21 Visual Fidelity Designing Multimedia Interfaces for Active Learning to Xerox Corporation **The Fusion of Hardware Design and Verification** George J. Milne, Fédération internationale pour le traitement de l'information. Working Group 10.2, International Federation for Information Processing. Working Group 10.2, 1988 Formal Methods in Computer-Aided Design Mandayam Srivas, Albert Camilleri, 1996-10-23 This book constitutes the refereed proceedings of the First International Conference on Formal Methods in Computer Aided Design FMCAD 96 held in Palo Alto California USA in November 1996 The 25 revised full papers presented were selected from a total of 65 submissions also included are three invited survey papers and four tutorial contributions The volume covers all relevant formal aspects of work in computer aided systems design including verification synthesis and testing Designing Correct Circuits Geraint Jones, Mary Sheeran, 2013-12-14 These proceedings contain the papers presented at a workshop on Designing Correct Circuits jointly organised by the Universities of Oxford and Glasgow and held in Oxford on 26 28 September 1990 There is a growing interest in the application to hardware design of the techniques of software engineering As the complexity of hardware systems grows and as the cost both in money and time of making design errors becomes more apparent so there is an eagerness to build on the success of mathematical techniques in program development The harsher constraints on hardware designers mean both that there is a greater need for good abstractions and rigorous assurances of the trustworthiness of designs and also that there is greater reason to expect that these benefits can be realised The papers presented at this workshop consider the application of mathematics to hardware design at several different levels of abstraction At the lowest level of this spectrum Zhou and Hoare show how to describe and reason about synchronous switching circuits using UNiY a formalism that was developed for reasoning about parallel programs Aagaard and Leeser use standard mathematical techniques to prove correct their implementation of an algorithm for Boolean simplification The circuits generated by their formal synthesis system are thus correct by construction Thuau and Pilaud show how the declarative language LUSTRE which was designed for programming real time systems can be used to specify synchronous circuits Computer Hardware Description Languages and their Applications D. Borriore, R. Waxman, 2014-06-28 The topic areas presented within this volume focus on design environments and the applications of

hardware description and modelling including simulation verification by correctness proofs synthesis and test The strong relationship between the topics of CHDL 91 and the work around the use and re standardization of the VHDL language is also explored The quality of this proceedings and its significance to the academic and professional worlds is assured by the excellent technical programme here compiled

Domain-Specific Program Generation Christian Lengauer, 2004-05-24

Program generation holds the promise of helping to bridge the gap between application level problem solutions and efficient implementations at the level of today s source programs as written in C or Java Thus program generation can substantially contribute to reducing production cost and time to market in future software production while improving the quality and stability of the product This book is about domain specific program generation it is the outcome of a Dagstuhl seminar on the topic held in March 2003 After an introductory preface by the volume editors the 18 carefully reviewed revised full papers presented are organized into topical sections on surveys of domain specific programming technologies domain specific programming languages tool support for program generation domain specific techniques for program optimization

Tools

and Algorithms for the Construction and Analysis of Systems Tiziana Margaria, 1996-03-20 This book presents the refereed proceedings of the Second International Workshop on Tools and Algorithms for the Construction and Analysis of Systems TACAS 96 held in Passau Germany in March 1996 The book presents 19 revised full papers selected from a total of 47 submissions together with 11 tool presentations and 3 invited papers The collection of papers addresses all current

aspects of the design and analysis of distributed systems the volume is organized in topical sections on tools model checking and testing security models and methods case studies and logic and programs

Formal Techniques in Real-Time and Fault-Tolerant Systems Mathai Joseph, 1988-09-14 This book is based on material from current research projects and cooperations and from a recent workshop in the area of Knowledge Base Management Systems It contains 25 revised papers and related discussions that concentrate on the integration of Database Technology deductive databases extended relational technology object oriented systems and Artificial Intelligence in particular logic programming and knowledge representation The emphasis of the book is on the integration of DB AI technology required for knowledge Base Management Systems The book isolates major conceptual contributions systems extensions and research directions that lead towards that goal This book is a European counterpart to another volume in the Topics in Information Systems Series On Knowledge Base Management Systems resulting from a North American workshop and edited by M Brodie and J Mylopoulos which concentrates on theoretical results and the more abstract levels of Knowledge Base Management

Concurrency 88 Friedrich H. Vogt, 1988-10-12 This volume contains the proceedings of CONCURRENCY 88 an international conference on formal methods for distributed systems held October 18 19 1988 in Hamburg CONCURRENCY 88 responded to great interest in the field of formal methods as a means of mastering the complexity of distributed systems In addition the impulse was determined by the fact that the various methodological approaches such as constructive or property oriented methods have not had an extensive comparative analysis nor have they been investigated with respect to their possible integration and their practical implications The following topics were addressed Specification Languages Models for Distributed Systems Verification and Validation Knowledge Based Protocol Modeling Fault Tolerance Distributed Databases The volume contains 12 invited papers and 14 contributions selected by the program committee They were presented by authors from Austria the Federal Republic of Germany France Israel Italy the Netherlands the United Kingdom and the United States

Functional Programming Kei Davis, John Hughes, 2012-12-06 Functional Programming is a relatively new area of computer science These proceedings contain 25 papers representing an excellent snapshot of the current state of functional programming and are written by the leading computer scientists in this area In some universities a functional programming language is used as the introductory teaching language and computer architectures are being designed and investigated to support functional languages

Automated and Algorithmic Debugging Peter A. Fritzson, 1993-11-10 Debugging has always been a costly part of software development and many attempts have been made to provide automatic computer support for this task Automated debugging has seen major developments over the last decade One successful development is algorithmic debugging which originated in logic programming but was later generalized to concurrent imperative and lazy functional languages Important advances have also been made in knowledge based program debugging and in approaches to automated debugging based on static and dynamic program slicing based on dataflow and dependence analysis technology This is the first collected volume

of papers on automated debugging and presents latest developments tutorial papers and surveys Functional Programming, Glasgow 1992 John Launchbury,Patrick Sansom,2012-12-06 The Glasgow Functional Programming Group is widely recognised for its research in lazy functional languages Once again this year for the fifth time we retreated to a Scottish seaside town to discuss our latest work this time spending three days in Ayr We were joined by a number of colleagues from other universities and from industry with whom we have been enjoying fruitful collaboration The workshop serves the dual purpose of ensuring that the whole group remains informed of each other s work and of providing workshop experience for research students Most participants presented a short talk about their work supplemented by papers which appeared in a draft proceedings distributed at the workshop Since then the papers have been reviewed and the majority are now published here following revision The workshop also contained a lively discussion session on functional language applications to which the industrial participants made very helpful contributions One interesting feature of this volume is the number of papers addressing practical issues of realistic use of functional languages from benchmarking and profiling to user interfaces and file handling It is perhaps indicative that at last lazy functional languages are being used for significantly larger applications than has been typical in the past This type of paper is likely to feature prominently in relevant conference proceedings for the next few years Other papers here continue to address more theoretical topics such as program logic semantics of non determinism program analysis and loop detection
