## **The Future Of Meta Analysis:**

*The Future of Meta-Analysis* Kenneth W. Wachter, Miron L. Straf, 1990-06-28 Scientific progress often begins with the difficult task of preparing informed conclusive reviews of existing research. Since the 1970s the traditional subjective approach to research reviewing in the social sciences has been challenged by a statistical alternative known as meta analysis. Meta analysis provides a principled method of distilling reliable generalizations from previous studies on a single topic thereby providing a quantitative and objective background for future research. *The Future of Meta Analysis* brings together expert researchers for an in depth examination of this new methodology not to promote a consensus view but rather to explore from several perspectives the theories, tensions and concerns of meta analysis and to illustrate through concrete examples the rationale behind meta analytic decisions. In a meta analysis prepared especially for this volume a statistician and a psychologist review the existing literature on aphasia treatment. In a second study experts analyze six still unpublished meta analyses sponsored by the National Institute of Education to investigate the effects of school desegregation on the academic achievement of black children. This unique case study approach provides valuable discussion of the process of meta analysis and of the current implications of meta analysis for policy assessment. Prepared under the auspices of the National Research Council, *The Future of Meta Analysis* presents a forum for leaders in this rapidly evolving field to discuss salient conceptual and technical issues and to offer a new theoretical framework, further methodological guidance and statistical innovations that anticipate a future in which meta analysis will play an even more effective and valuable role in social science research.

**The Future of Correctional Rehabilitation** Ronen Ziv, 2017-08-23 In the aftermath of Martinson's 1974 'nothing works' doctrine scholars have made a concerted effort to develop an evidence based corrections theory and practice to show what works to change offenders Perhaps the most important contribution to this effort was made by a group of Canadian psychologists most notably Donald Andrews James Bonta and Paul Gendreau who developed a treatment paradigm called the Risk Need Responsivity RNR model which became the dominant theory of correctional treatment This approach was more recently challenged by a perspective developed by Tony Ward Shadd Maruna and others called the Good Lives Model GLM Based in part on desistance research and positive psychology this model proposes to rehabilitate offenders by building on the strengths offenders possess GLM proponents see the RNR model as a deficit model that fixes dynamic risk factors rather than identifying what offenders value most and using these positive factors to pull them out of crime Through a detailed examination of both models theoretical and correctional frameworks *The Future of Correctional Rehabilitation: Moving Beyond the RNR Model and Good Lives Model Debate* probes the extent to which the models offer incompatible or compatible approaches to offender treatment and suggests how to integrate the RNR and GLM approaches to build a new and hopefully more effective vision for offender treatment A foreword by renowned criminologist Francis T Cullen helps put the material into context This book will be of much interest to scholars and students studying correctional rehabilitation as well as practitioners working with offenders

*The Future of Prevention and Treatment of Breast Cancer* Jose Russo, 2021-07-26 The objective of this book is to provide a critical analysis of the present prevention strategies for breast cancer emphasizing the cost benefits and quality of life of the patient Rooted in the present knowledge of breast cancer biology and prevention and treatment options the book will describe the future tools that could be available to oncologists and how these new approaches may change the landscape of recurrence and survival of the disease Special emphasis will be given to the prevention strategies counterposing the present limitations and conflicting prevention guidelines for both hereditary and preventive non hereditary breast cancer and propose how the implementation of new strategies based on the present knowledge could save millions of lives and be more cost efficient The book will present a critical status of the treatment and prevention of breast cancer and detail how a quantum leap could be achieved in the field by applying present basic research knowledge to clinical application
