## **The Hereditary Basis Of Allergic Diseases:**

The Hereditary Basis of Allergic Diseases Stephen T. Holgate, John W. Holloway, 2012-12-06 Allergic diseases are complex and involve a range of environmental factors interacting with a susceptible genotype The familial clustering of diseases such as asthma and hay fever has been recognised for over two centuries but identification of the genetic basis to this had to await the molecular biological revolution Estimates of the contribution that genetic factors make to asthma susceptibility range from 35% to 70% For the majority of allergic diseases segregation analysis has not identified a consistent Mendelian pattern of inheritance which when combined with multiple phenotypes and environmental interactions has made identifying candidate genes especially difficult and at times controversial Part of the difficulty has been lack of agreement over phenotype definitions reduced power of studies to predict linkage and association and importantly lack of true heterogeneity between populations Despite these difficulties the last decade has witnessed enormous progress in this field Hereditary Basis of Disease May Sherman, 1968 *The Genetic Basis of Common Diseases* Richard A. King, Jerome I. Rotter, Arno G. Motulsky, 2002-10-17 Since the first edition of this highly acclaimed text was published in 1992 much new knowledge has been gained about the role of genetic factors in common adult diseases and we now have a better understanding of the molecular processes involved in genetic susceptibility and diseases mechanisms The second edition fully incorporates these advances The entire book has been updated and twelve new chapters have been added Most of these chapters deal with diseases such as gallstones osteoporosis osteoarthritis skin cancer other common skin diseases prostate cancer and migraine headaches that are seen by all physicians Others address the genetic and molecular basis of spondylarthropathies lupus hemochromatosis IgA deficiency mental retardation hearing loss and the role of mitochondrial variation in adult diseases Chapters on the evolution of human genetic disease and on animal models add important background on the complexities of these diseases Unique clinical applications of genetics to common diseases are covered in the additional new chapters on genetic counseling pharmacogenetics and the genetic consequences of modern therapeutics **The NPY Family of Peptides in Immune Disorders, Inflammation, Angiogenesis, and Cancer** Giora Z. **Turning up the Heat on Pain: TRPV1 Receptors in Pain and Inflammation** Annika B. Malmberg, Keith R. Bley, 2006-01-17 Despite tremendous advances in the understanding of the sensory nervous system which have accompanied the recent explosive growth of the neurosciences remarkably few innovative medicines directed towards pain and inflammation are available Indeed many patients are still prescribed analgesic and anti inflammatory medications that were identified long ago as components of herbal remedies Similarly potential new medicines in clinical evaluation based on capsaicin and the capsaicin receptor are both grounded firmly on folk traditions and yet rely upon the most contemporary techniques of drug discovery and delivery The first formal report of the pain relieving properties of capsaicin appeared in 1850 1 However for centuries before this capsaicin containing extracts had been used as folk medicines in cultures with access to pepper plants much in the same way as poppy or willow bark extracts were Despite widespread use it was not until 1878 that the selective action of capsaicin on the sensory nervous system was recognized 2 In Chapter 1 of this volume Janos Szolcsanyi reviews this early research which culminated with the seminal studies of Nicholas Jancso and his colleagues in Hungary in the 1940s Since then capsaicin and related vanilloid compounds have played a prominent role in analgesia and inflammation investigations because of their ability to selectively activate a subpopulation of sensory neurons and produce sensations of pain and localized erythema
