Subplane Covered Nets Norman L. Johnson, 2000-01-03 This work confronts the question of geometric processes of derivation specifically the derivation of affine planes keying in on construction techniques and types of transformations in which lines of a newly created plane can be understood as subplanes of the original plane The book provides a theory of subplane covered nets without restriction to the finite case or imposing commutativity conditions *Combinatorics of Spreads and Parallelisms* Norman Johnson, 2010-06-03 *Combinatorics of Spreads and Parallelisms* covers all known finite and infinite parallelisms as well as the planes comprising them It also presents a complete analysis of general spreads and partitions of vector spaces that provide groups enabling the construction of subgeometry partitions of projective spaces The book describes general partitions **Geometry of Derivation with Applications** Norman L. Johnson, 2023-06-06 *Geometry of Derivation with Applications* is the fifth work in a longstanding series of books on combinatorial geometry Subplane Covered Nets Foundations of Translation Planes Handbook of Finite Translation Planes and Combinatorics of Spreads and Parallelisms Like its predecessors this book will primarily deal with connections to the theory of derivable nets and translation planes in both the finite and infinite cases Translation planes over non commutative skewfields have not traditionally had a significant representation in incidence geometry and derivable nets over skewfields have only been marginally understood Both are deeply examined in this volume while ideas of non commutative algebra are also described in detail with all the necessary background given a geometric treatment The book builds upon over twenty years of work concerning combinatorial geometry charted across four previous books and is suitable as a reference text for graduate students and researchers It contains a variety of new ideas and generalizations of established work in finite affine geometry and is replete with examples and applications **Mostly Finite Geometries** Norman Johnson, 1997-05-06 Based on the proceedings of the conference held at the University of Iowa in honour and celebration of the mathematician T G Ostrom's 80th birthday this text focuses on finite geometries as well as topological geometries in the infinite case some of which originate with ideas of finite geometric objects It includes information about flocks of quadratic cones and related geometric and combinatorial structures A Collection of Contributions in Honour of Jack van Lint P.J. Cameron, H.C.A. van Tilborg, 2016-06-06 This collection of contributions is offered to Jack van Lint on the occasion of his sixtieth birthday and appears simultaneously in the series Topics in Discrete Mathematics and as a special double volume of Discrete Mathematics Volumes 106 107 It is hoped that the papers selected all written by experts in their own fields represent the many interesting areas that together constitute the discipline of Discrete Mathematics It is in this sphere that van Lint has become the acknowledged master and this expansive volume serves to demonstrate the enormous significance he has had on the development of Discrete Mathematics during the last 30 years Handbook of Finite Translation Planes Norman Johnson, Vikram Jha, Mauro Biliotti, 2007-02-15 The Handbook of Finite Translation Planes provides a comprehensive listing of
