Department of the Army. Personnel Research Office, 1962 **Cooperative Breeding in Vertebrates** Walter D. Koenig, Janis L. Dickinson, 2016-01-07 Cooperative breeders are species in which individuals beyond a pair assist in the production of young in a single brood or litter Although relatively rare cooperative breeding is widespread taxonomically and continues to pose challenges to our understanding of the evolution of cooperation and altruistic behavior Bringing together long term studies of cooperatively breeding birds mammals and fish this volume provides a synthesis of current studies in the field The chapters are organised by individual studies of particular species or in the case of mole rats two closely related cooperatively breeding species Each focuses not only on describing behavior and ecology but also on testing evolutionary hypotheses for the form and function of the diverse and extraordinary cooperative breeding lifestyles that have been discovered This unique and comprehensive text will be of interest to graduate students and researchers of behavioral ecology and the evolution of cooperation **CSIR NET Life Science - Unit 11 - Evolution** Mr. Rohit Manglik, 2024-07-12 EduGorilla Publication is a trusted name in the education sector committed to empowering learners with high quality study materials and resources Specializing in competitive exams and academic support EduGorilla provides comprehensive and well structured content tailored to meet the needs of students across various streams and levels Cooperative Breeding in Birds Peter B. Stacey, Walter D. Koenig, 1990-04-19 Cooperative breeding is an unusual kind of social behaviour found in a few hundred species worldwide in which individuals other than the parents help raise young Understanding the apparently altruistic behaviour of helpers has provided numerous challenges to evolutionary biologists This book includes detailed first

hand summaries of many of the major empirical studies of cooperatively breeding birds. It provides comparative information on the demography, social behaviour and behavioural ecology of these unusual species and explores the diversity of ideas and the controversies which have developed in this field. The studies are all long term and consequently the book summarises some of the most extensive studies of the behaviour of marked individuals ever undertaken. Graduate students and research workers in ornithology, sociobiology, behavioural ecology and evolutionary biology will find much of value in this book.

Perspectives in Ornithology Alan H. Brush, George Alfred Clark, 1983-08-31. Collects together a series of essays and commentaries by leading authorities about active areas of research on the biology of birds. *Bakers' Helper*, 1918

Avian Biology Donald S. Farner, James R. King, Kenneth C. Parkes, 2013-10-22. Avian Biology Volume VI is a compendium of papers that deals with selected aspects of avian biology. One paper discusses the avian mating behavior and covers topics such as monogamy, polygyny, male incubation and female emancipation. These papers also list a table of the species of birds in which polyandry has been observed. Another paper examines bird migration in relation to the mechanism and development of migration with emphasis on the evolution and function, ultimate causation of migration. Another paper discusses the advantages of one form of social organization of birds during the non reproductive season over another form. This paper reasons the possibility of the existence of a cost benefit social behavior. Other papers discuss some physical features found in birds such as stomach oils and glycogen filled cells. Another paper deals with the respiratory physiology of birds as new research data have been made available in this area. This book can prove useful for investigators in avian biology, zoologists and readers who have a general interest in birds.

Readings in Animal Cognition Marc Bekoff, Dale Jamieson, 1996. This collection of 24 readings is the first comprehensive treatment of important topics by leading figures in the rapidly growing interdisciplinary field of animal cognition. Taken together the essays provide the nucleus for an introductory course in animal cognition, cognitive ethology and comparative psychology, philosophy of biology or philosophy of mind. Selections are grouped in five sections: Perspectives on Animal Cognition, Cognitive and Evolutionary Explanations, Recognition, Choice, Vigilance and Play, Communication and Language and Animal Minds. Seventeen essays are reprinted from the authors' much cited two volume collection *Interpretation and Explanation in the Study of Animal Behavior*. One essay taken from that book has been subsequently revised and five additional essays are recent examples of critical thinking in cognitive ethology.
