Descartes Reinvented Tom Sorell, 2005-07-11 In this study Tom Sorell seeks to rehabilitate views that are often instantly dismissed in analytic philosophy His book serves as a reinterpretation of Cartesianism and responds directly to the dislike of Descartes in contemporary philosophy To identify what is defensible in Cartesianism Sorell starts with a picture of unreconstructed Cartesianism which is characterized as

realistic antisceptical but respectful of scepticism rationalist centered on the first person dualist and dubious of the comprehensiveness of natural science and its supposed independence of metaphysics Bridging the gap between history of philosophy and analytic philosophy Sorell also shows for the first time how some contemporary analytic philosophy is deeply Cartesian despite its outward hostility to Cartesianism Galileo, Darwin, and Hawking Phil Dowe,2005-03-15 The history of the interaction between science and religion is fraught with tension although as philosopher Phil Dowe demonstrates many thoughtful and religious people have also found harmony between these two crucial fields This fascinating book insightfully surveys the relationship of science reason and religion giving special attention to the most contentious topics cosmology evolution and miracles Providing a superb introduction to the philosophy of science Dowe s Galileo Darwin and Hawking contends that there are four basic ways to relate science and religion Two of them naturalism and religious science present these endeavors as antagonistic By contrast an independence view understands them as wholly unrelated Finally an interaction account sees religion and science as complementary perhaps even dependent on one another Dowe finds this last perspective the most historically and philosophically compelling He argues his case by exploring the history of science highlighting the life and work of three scientific giants Galileo Galilei Charles Darwin and Stephen Hawking *Philosophy of Science: Key Concepts* Steven French,2016-01-28 Science has made a huge impact on human society over hundred years but how does it work How do scientists do the things they do How do they come up with the theories How do they test them How do they use these theories to explain phenomena How do they draw conclusions from them about how the world might be Now updated this second edition of *Philosophy of Science Key Concepts* looks at each of these questions and more Taking in turn the fundamental theories processes and views lying at the heart of the philosophy of science this engaging introduction illuminates the scientific practice and provides a better appreciation of how science actually works It features Chapters on discovery evidence verification and falsification realism and objectivity Accessible overviews of work of key thinkers such as Galileo Einstein and Mullis A new chapter on explanation An extended range of easy to follow and contemporary examples to help explain more technical ideas Study exercises an annotated bibliography and suggestions of Where to Go Next Succinct and approachable *Philosophy of Science Key Concepts* outlines some of the most central and important scientific questions problems and arguments without assuming prior knowledge of philosophy This enjoyable introduction is the perfect starting point for anyone looking to understand how and why science has shaped and changed our view of the world
