Sintering Symposia have been devoted to more specific topics and they also take place in different countries. The aim of these Conferences and their related Summer Schools has been to bring together scientists from all over the world who work in various fields of science and technology concerned with sintering and sintered materials. A total of seven IISS Conferences have been held over the period 1969-1989 and they have been supplemented by the four Topical Sintering Symposia held in Yugoslavia, Poland, India and Japan in 1975, 1979, 1983 and 1987 respectively. This most recent five day Conference addressed the fundamental scientific background as well as the technological state of the art pertinent to science of sintering and high technology sintered materials. **Scientific Monograph** United States. **Agglomeration in Industry, 2 Volume Set** Wolfgang B. Pietsch, 2004-12-27. An up to date overview dealing with the occurrence and key applications of agglomeration including unwanted adhesion and beneficial size enlargement in pharmaceutical, food and animal feed, chemical fertilizer and agrochemical, mineral building material and ceramic metal solid fuel as well as other industries. Furthermore, the book emphasizes recent developments at the level of single particles and applications of agglomeration phenomena in nanotechnology. The author has a vast academic and industrial experience as researcher, teacher, developer, designer, vendor and user. He is an expert and consultant in the field of agglomeration, its technologies and products. This background makes the detailed evaluation of the subject possible. Wolfgang Pietsch has held a number of leading positions in both US and German companies and is a frequent speaker at conferences and seminars. He has already written three earlier books on agglomeration. Intended for everybody working in companies that process and handle particulate solids, this book helps in understanding and controlling unwanted agglomeration as well as promoting the application development and improvement of methods for the beneficial use of agglomeration. **Selective Laser Sintering**

**Additive Manufacturing Technology** Chunze Yan, Yusheng Shi, Li Zhaoqing, Shifeng Wen, Qingsong Wei, 2020-11-20

Selective Laser Sintering Additive Manufacturing Technology is a unique and comprehensive guide to this emerging technology. It covers in detail the equipment, software, algorithms and control systems, material preparations and process technology, precision control, simulation analysis and provides examples of applications of selective laser sintering (SLS). SLS technology is one of the most promising advances in 3D printing due to the high complexity of parts it can form, short manufacturing cycle, low cost and wide range of materials. It is compatible with typical examples of SLS technology include SLS manufacturing, casting molds, sand molds, core injection molds with conformal cooling channels and rapid prototyping of ceramic and plastic functional parts. It is already widely used in aviation, aerospace, medical treatment, machinery and numerous other industries. Drawing on world leading research, the authors provide state of the art descriptions of the technologies, tools and techniques which are helping academics and engineers use SLS ever more effectively and widely. Provides instructions for how to accurately use SLS for forming. Analyses the numerical simulation methods for key SLS technologies. Addresses the use of SLS for a range of materials including polymer, ceramic and coated sand powder.
