Edited by John Barrow. [With plates, including a facsimile.] James

Cook, 1860 **Extinct Animals** Ross Piper, 2009-03-20 Everyone is familiar with the dodo and the woolly mammoth but how many people have heard of the scimitar cat and the Falkland Island fox Extinct Animals portrays over 60 remarkable animals that have been lost forever during the relatively recent geological past Each entry provides a concise discussion of the history of the animal how and where it lived and how it became extinct as well as the scientific discovery and analysis of the creature In addition this work examines what led to extinction from the role of cyclical swings in the Earth s climate to the spread of humans and their activities Many scientists believe that we are in the middle of a mass extinction right now caused by the human undermining of the earth s complex systems that support life Understanding what caused the extinction of animals in the past may help us understand and prevent the extinction of species in the future Extinct Animals examines the biology and history of some of the most interesting creatures that have ever lived including The American Terror Bird which probably became extinct over 1 million years ago who were massive predators some of which were almost 10 feet tall the Rocky Mountain Locust last seen in 1902 formed the most immense animal aggregations ever known with swarms estimated to include over 10 trillion insects the Giant Ground Sloth which was as large as an elephant and the Neandertals the first Europeans which co existed with prehistoric Homo sapiens Extinct Animals includes illustrations many created for the work

that help the reader visualize the extinct creature and each entry concludes with a list of resources for those who wish to do further research

Canal Boatman Richard Garrity, 1984-07-01

Richard Garrity grew up on his father's boats on the Erie Canal in the early years of this century. From 1905 until 1916 when his father operated boats first in the lumber trade and later for gravel hauling, he was surrounded by the busy life of a now bygone era in canal boating in Upstate New York. When the Barge Canal System opened in 1918, Garrity began a career that lasted until his retirement as a tug engineer in 1970. This story is chock full of Americana that is not only significant and authentic but engagingly written. Garrity's life and work have been intimately bound up with the famed Big Ditch which has been referred to in more romantic literature as the shining ribbon of water. It was a hard but happy life on the waterways of Upstate New York as seen in the text and dozens of illustrations included in this book.

Ranaviruses Matthew J. Gray, V. Gregory Chinchar, 2024-10-11

This is an open access book. Ranaviruses, double-stranded DNA viruses, family Iridoviridae, that cause systemic life-threatening disease in a variety of amphibians, reptiles, and fish, have contributed to mass die-offs of both wild and captive populations around the globe. These viruses are emerging and increasingly responsible for population declines of ectothermic vertebrates. Because amphibians, reptiles, and freshwater turtles are suitable hosts and among the most imperiled vertebrate taxa in the world, ranaviruses can have significant impacts on biodiversity and ecosystem function. Additionally, many fish that are raised in aquaculture facilities and traded internationally are suitable hosts; thus, the potential economic impact of ranaviruses is significant. Ranaviruses also serve as a model for understanding viral replication and gene function.

among large double stranded DNA viruses e g poxviruses asfarvirus and ascoviruses Lastly study of the host immune response to ranaviral disease and the identification of viral immune evasion genes that negatively regulate host immune functions provide insight into which specific immune elements are most important in protecting host species against severe disease The effort to produce a 2nd edition of our earlier work grew out of a recent meeting 1st Global Amphibian and Reptile Disease Conference held in August 2022 Given the continued research in ranaviruses and ranaviral disease since the first edition this new book updates the latest information on ranaviruses and provides guidance on how to monitor and manage ranaviruses in cold blooded vertebrate populations
