There are important social changes that are influencing the way transport is now viewed. In particular, there are concerns that current trends in transport are not sustainable over the long term. This paper describes some of the main forces for social change and the way that they interact with transportation. It highlights a number of key areas where conceptual research work could prove advantageous and considers institutional mechanisms that would foster, in particular, transatlantic initiatives in these fields. © 1997 Elsevier Science Ltd. Social change does not occur at a constant pace. Rather there is a complex blend or package of modifications to existing trends, new trends and mood breaks that interact to bring about changes to the way society develops. The process is also not unidirectional but embodies a range of important and still imperfectly understood feedback loops. A variety of factors make the late twentieth century a particularly important period in this respect. Rising incomes, more leisure time, changing demographic patterns, better education, technological advances, emerging life styles and new political priorities are among the factors influencing and being influenced by social change. These forces have, in very broad terms, led to outcomes of enhanced flexibility, fragmentation, polarization and differentiation in time and space.

Our understanding of the key driving forces for the new social structures is still limited. What is clear is that one important element in the process is linked to conflicting pressures of centralization. Combinations of new networks, externalities and the breaking down of barriers have led to pressures on the one hand for geographical and social concentration and uniformity but on the other for diversity and spread. At one level this may be viewed in terms of the continued urbaniza-

tion of many societies but at the same time the growth in 'newscities' and only in terms of location and job selection but also regarding shopping, recreational and other everyday activities. Transport considerations play an important role in shaping the nature and direction of centrifugal forces.

The forces bringing social change and the changes that emerge have linkages with all aspects of the social fabric. In a more specific context, transport is both an influence on the nature of social change and a reactor to it. We are, however, poorly informed about the role of social change in determining transport behaviour. Many of the important areas of interest, such as the interaction between changing household structure, travel behaviour and land-use, have been examined before but significant areas of ignorance remain. There are also newer issues, such as the interaction of transport and various communications systems on travel behaviour, land-use and social structure, which are adding to this area of ignorance.

Modern transport affords mobility, facilitates post-Fordist production and allows political cohesion. Degrees of access to transport networks affect social patterns at all levels of spatial aggregation. Transport supply, however, is regulated by political interests and market pressures both of which reflect changes in social attitudes, structures and priorities. Concerns about environmental degradation and economic efficiency are reflections of social changes in social

Social Change And Sustainable Transport:

Social Change and Sustainable Transport William Richard Black, Peter Nijkamp, 2002-11-29 Transportation research has traditionally been dominated by engineering and logistics research approaches. This book integrates social economic and behavioral sciences into the transportation field. As its title indicates, emphasis is on socioeconomic changes which increasingly govern the development of the transportation sector. The papers presented here originated at a conference on Social Change and Sustainable Transport held at the University of California at Berkeley in March 1999 under the auspices of the European Science Foundation and the National Science Foundation. The contributors who represent a range of disciplines including geography and regional science, economics, political science, sociology and psychology come from twelve different countries. Their subjects cover the consequences of environmentally sustainable transportation vs the business as usual status quo, the new phenomenon of edge cities, automobile dependence as a social problem, the influence of leisure or discretionary travel and of company cars, the problems of freight transport, the future of railroads in Europe, the imposition of electronic road tolls, potential transport benefits of e-commerce and the electric car. **Sustainable Transportation**

William Richard Black, 2010-01-01 During the last two decades, sustainability has become the dominant concern of transportation planners and policymakers. This timely text provides a framework for developing systems that move people and products efficiently while minimizing damage to the local and global environment. The book offers a uniquely comprehensive perspective on the problems surrounding current transportation systems: climate change, urban air pollution, diminishing petroleum reserves, safety issues and congestion. It explores the full range of possible solutions including applications of pricing, planning, policy, education and technology. Numerous figures, tables and examples are featured with a primary focus on North America. *Social Dimensions of Sustainable Transport* Stefan Poppelreuter, 2016-12-05 Based on the work of the STELLA Sustainable Transport in Europe and Links and Liaisons with America Focus Group 3, this volume brings together leading transport academics to discuss society behaviour and public private transport. Theoretical and empirical research from across North America and Europe form the basis of this book, which is composed of twelve chapters that fall into four logical sections. Chapters in the first section provide a contextual overview and survey trends in mobility behaviour and prospects of sustainable transport in the two continents. Chapters in the second section provide comparative assessments of difficulties posed by contemporary transport systems for three particular user groups: low income, female and elderly. Interventions indicated and research needed. The third set of chapters survey recent developments in behavioural modelling that lend themselves to the study of the constellation of issues concerning STELLA Focus Group 3. The remaining chapters of the book address critical issues of equity and policy implementation. Sustainable Transportation Henrik Gudmundsson, Ralph P. Hall, Greg Marsden, Josias Zietsman, 2015-07-03 This textbook provides an introduction to the concept of sustainability in the context of transportation planning, management and decision making. The book is divided into two

parts In the first part indicators and frameworks for measuring sustainable development in the transportation sector are developed In the second the authors analyze actual planning and decision making in transportation agencies in a variety of governance settings This analysis of real world case studies demonstrates the benefits and limitations of current approaches to sustainable development in transportation The book concludes with a discussion on how to make sustainability count in transportation decision making and practice

Experimenting for Sustainable Transport Remco Hoogma, Rene Kemp, Johan Schot, Bernhard Truffer, 2005-06-29 This book describes eight experiments with sustainable transport options which are analysed in the context of established travel practice and car ownership and the problems they pose and the trends in transport technology and policy

International Handbook on Transport and Development R. Hickman, D. Bonilla, M. Givoni, D. Banister, 2015-08-28 In the last forty years or so the research field exploring the relationship and interaction between transport and development has developed rapidly While sophistication in analysis has increased understanding the effective integration of transport and development often remains poor in theory and in practice with sometimes devastating effects This Handbook provides a comprehensive analysis of both the current and emerging thinking in this field drawing on multidisciplinary thinking in transport planning transport urban and spatial economics and the wider social sciences With 45 chapters from leading international authors the book is organised around three main themes urban structure and travel transport and spatial impacts wider dimensions in transport and development The chapters each present commentary on key issues within these themes presenting the debate on the impacts of urban structure on travel the impacts of transport investment on development and social and cultural change on travel A multitude of competing interdisciplinary perspectives are considered leaving the reader with an invaluable comprehensive and critical understanding of the field This major Handbook will serve as a guide for undergraduates and graduate students researchers consultants and also practitioners and policy makers wishing to find a comprehensive and original reference to research on transport and development Contributors J A Annema F Avelino D Banister D Bonilla F Bruinsma C C Cantarelli X Jason Cao C L Chen G Cohen Blankshtain C Curtis G Dane J Dodson A Donald R Dowling M Echenique A El Geneidy R Ewing E Feitelson B Flyvbjerg N Garrick H Geerlings K Geurs M Givoni A R Goetz P Gordon A Grigolon D Halden P Hall I Hamiduddin S Handy P Headicar D A Hensher D Hidalgo R Hickman R Hjorthol M Hillman E Holden T Holvad H Holzapfel M Iacono O B Jensen P Jones J Kenworthy S Kenyon C A Klckner K J Krizek B Lee S Leleur D Levinson T Li Z Li K Linnerud S Marshall W Marshall E Matthies L Meija Dorantes R Meyfahrt P Mokhtarian J C Mu oz P Naess P Newman S Nordbakke S Petheram S Rasouli P Rietveld O Rotem Mindali T Schwanen N Sipe D Stead P Stoker G Stokes H Timmermans B Van Wee R Wilson D Yang

Transport Models in Urban Planning Practices Marco te Brömmelstroet, Luca Bertolini, 2016-04-08 This book explores how transportation models can play a role in a changing transport planning and policy making context Most models are rooted in decades of development work and are geared to offer value free academic and explicit knowledge to transport planning experts However planning

practice has changed dramatically over the years resulting in a less technical rational view on the use of such knowledge especially so in early strategy making phases More and more complex policy goals integration of a wide area of other policy domains a wider ever changing and much more mixed group of planning participants and much more focus on wicked problems The book maps how this influences the effectiveness of transport modelling exercises and explores several state of the art implementations This book was published as a special issue of Transport Reviews

Intelligent Transportation Systems Ahmed Abdel-Rahim, 2012-03-16 Intelligent Transportation Systems ITS have transformed surface transportation networks through the integration of advanced communications and computing technologies into the transportation infrastructure ITS technologies have improved the safety and mobility of the transportation network through advanced applications such as electronic toll collection in vehicle navigation systems collision avoidance systems and advanced traffic management systems and advanced traveler information systems In this book that focuses on different ITS technologies and applications authors from several countries have contributed chapters covering different ITS technologies applications and management practices with the expectation that the open exchange of scientific results and ideas presented in this book will lead to improved understanding of ITS technologies and their applications

Social Costs and Sustainable Mobility Klaus Rennings, Olav Hohmeyer, Richard L. contributors to this volume examine how to take advantage of the great potential offered by urban areas in the rural world to favour competitiveness and encourage economic activity Taking a European perspective the authors identify the main socio economic advantages generated by urbanized population settlements that small and medium sized rural towns can provide Although much attention is currently focused on the efficient use of scarce natural resources and land they argue that towns have an increasingly important economic and social role to play in rural areas
