Handbook of Engineering Acoustics Gerhard Müller, Michael Möser, 2012-11-06 This book examines the physical background of engineering acoustics focusing on empirically obtained engineering experience as well as on measurement techniques and engineering methods for prognostics Its goal is not only to describe the state of art of engineering acoustics but also to give practical help to engineers in order to solve acoustic problems It deals with the origin the transmission and the methods of the abating different kinds of air borne and structure borne sounds caused by various mechanisms from traffic to machinery and flow induced sound In addition the modern aspects of room and building acoustics as well as psychoacoustics and active noise control are covered

Modeling the Radiation of Modern Sound Reinforcement Systems in High Resolution Stefan Feistel, 2014 Starting from physical theory this work develops a novel framework for the acoustic simulation of sound radiation by loudspeakers and sound reinforcement systems First a theoretical foundation is derived for the accurate description of simple and multi way loudspeakers using an advanced point source CDPS model that incorporates phase data The model's practical implementation is presented including measurement requirements and the GLL loudspeaker data format specification In the second part larger systems are analyzed such as line arrays where the receiver may be located in the near field of the source It is shown that any

extended line source can be modeled accurately after decomposition into smaller CDPS elements The influence of production variation among elements of an array is investigated and shown to be small The last part of this work deals with the consequences of fluctuating environmental conditions such as wind and temperature on the coherence of sound signals from multiple sources A new theoretical model is developed that allows predicting the smooth transition from amplitude to power summation as a function of the statistical properties of the environmental parameters A part of this work was distinguished with the AES Publications Award 2010 Parts of the proposed data format have been incorporated into the international AES56 standard
