Schunn, Christian Lebiere, Paul Munro, 2004-09-15 The International Conference on Cognitive Modeling brings together researchers who develop computational models to explain and predict cognitive data The core theme of the 2004 conference was Integrating Computational Models encompassing an integration of diverse data through models of coherent phenomena integration across modeling approaches and integration of teaching and modeling This text presents the proceedings of that conference The International Conference on Cognitive Modeling 2004 sought to grow the discipline of computational cognitive modeling by providing a sophisticated modeling audience for cutting edge researchers in addition to offering a forum for integrating insights across alternative modeling approaches in both basic research and applied settings and a venue for planning the future growth of the discipline The meeting included a careful peer review process of 6 page paper submissions poster abstracts to include late breaking work in the area prizes for best papers a doctoral consortium and competitive modeling symposia that compare and contrast different approaches to the same phenomena

Computational Neuroscience Wanpracha Chaovalitwongse, Panos M. Pardalos, Petros Xanthopoulos, 2010-07-03 This book represents a collection of recent advances in computational studies in neuroscience research that practically applies to a collaborative and integrative environment in engineering and medical domains This work has been designed to address the explosion of interest by academic researchers and practitioners in highly effective coordination between computational models and tools and quantitative investigation of neuroscientific data To bridge the vital gap between science and medicine this book brings together diverse research areas ranging from medical signal processing image analysis and data mining to neural network modeling regulation of gene expression and brain dynamics We hope that this work will also be of value to investigators and practitioners in academic institutions who become involved in computational modeling as an aid in translating information in neuroscientific data to their colleagues in medical main This volume will be very appealing to graduate and advanced undergraduate students researchers and practitioners across a wide range of industries e g pharmaceutical chemical biological sciences who require a detailed overview of the practical aspects of computational modeling in real life neuroscience problems For this reason our audience is assumed to be very diverse and heterogenous including vii viii Preface researchers from engineering computer science statistics and mathematics mains as well as medical and biological scientists physicians working in scienti c research to understand how basic science can be
