Snake Who Was Afraid Of People:

The Snake Who Was Afraid of People Barry Louis Polisar, 1988 Leo the snake's fear of humans proves well founded when a boy takes him for his science project *The Fear of Snakes* Nobuyuki Kawai, 2019-09-05 This book provides a series of compelling evidence that shows that humans have innate fear of snakes Building on the previous studies on the Snake Detection Theory SDT the author presents a summary of psychological and neuropsychological experiments to explain the fear of snakes in humans and primates Readers will come to understand why and how we are afraid of snakes from an evolutionary perspective The first half of the book discusses the history of psychological behaviorism and neobehaviorism The latter half of the book consists mainly of the experimental studies performed by the author with a focus on three key items First compared with other animals snakes especially draw the attention of primates and humans Second the ability of primates and humans to recognize snakes with particular efficiency Third processing mechanisms within the brain for snake detection is discussed from a new viewpoint The book offers a unique resource for all primatologists psychologists neuroscientists anthropologists herpetologists and biologists who are interested in the evolution of visual and cognitive systems mechanisms of fear snakes or primates **Snakes, People, and Spirits, Volume One** Robert Hazel, 2019-11-05 This two volume publication offers an in depth analysis of ophidian symbolism in Eastern Africa while setting the topic within its regional and historical context namely with regards to the rest of Africa ancient Egypt and Mesopotamia the Greek world ancient Palestine Arabia India and medieval and pre Christian Europe Through the ages most of those areas have connected with Eastern Africa in a broad sense where ophidian symbolism was as rampant and far reaching if not more so as anywhere else on the continent and perhaps in past civilisations Much as in the wider context snakes were held to be long lived closely related to holes caverns trees and water life and death and credited with a liking for milk Even though ophidian symbolism has always been developed out of the outstanding biological and ethological features of snakes the process of symbolisation which plays a crucial role in the elaboration of cultural systems and the shaping of human experience was inevitably at work This first volume deals with snakes as a zoological category snake symbolism as perceived by encyclopaedists and psychologists and ophidian symbolism as it occurred in ancient civilisations It explores the traditional African scene in general with a view to set the scene for a more proximate baseline for comparison The divide between animals and humans was porous and snakes had a more or less equal footing in both the animal realm and the spiritual world Key features of snake symbolism in traditional Eastern Africa are then examined in detail especially phantasmagorical snakes the rainbow serpent snake totems and snake related witches and ritual leaders among others In Eastern Africa the meanings attributed to snakes were multifaceted and paradoxical Overall the two volumes of this publication show that African snake symbolism broadly echoed the diverse representations of ancient civilisations The widely acknowledged assimilation of snakes to death and Evil is therefore unrepresentative both historically and culturally *Annual Report Pomological and Fruit Growing*

Society of the Province of Quebec,1908 **Anxiety** Stanley Rachman,2004 Rachman deals with definitions and the nature of anxiety and fear theories and influences on anxiety panic and cognitive theory specific phobias and the conditioning theory of fear **All We Have to Fear** Allan V. Horwitz, PhD,Jerome C. Wakefield,2012-06 Thirty years ago it was estimated that less than five percent of the population had an anxiety disorder Today some estimates are over fifty percent a tenfold increase Is this dramatic rise evidence of a real medical epidemic In All We Have to Fear Allan Horwitz and Jerome Wakefield argue that psychiatry itself has largely generated this epidemic by inflating many natural fears into psychiatric disorders leading to the over diagnosis of anxiety disorders and the over prescription of anxiety reducing drugs American psychiatry currently identifies disordered anxiety as irrational anxiety disproportionate to a real threat Horwitz and Wakefield argue to the contrary that it can be a perfectly normal part of our nature to fear things that are not at all dangerous from heights to negative judgments by others to scenes that remind us of past threats as in some forms of PTSD Indeed this book argues strongly against the tendency to call any distressing condition a mental disorder To counter this trend the authors provide an innovative and nuanced way to distinguish between anxiety conditions that are psychiatric disorders and likely require medical treatment and those that are not the latter including anxieties that seem irrational but are the natural products of evolution The authors show that many commonly diagnosed irrational fears such as a fear of snakes strangers or social evaluation have evolved over time in response to situations that posed serious risks to humans in the past but are no longer dangerous today Drawing on a wide range of disciplines including psychiatry evolutionary psychology sociology anthropology and history the book illuminates the nature of anxiety in America making a major contribution to our understanding of mental health Feasting on the Word Lenten Companion David L. Slither Stephen S. Hall,2025-04-22 In this important and pioneering The New York Times Book Review book a science writer reintroduces readers to The Snake encouraging our initial reaction to the slithery creature to be one of awe rather than disgust For millennia depictions of snakes as alternatively beautiful and menacing creatures have appeared in religious texts mythology poetry and beyond From the foundational deities of ancient Egypt to the reactions of squeamish children today it is a historically commonplace belief that snakes are devious dangerous and even evil But where there is hatred and fear there is also fascination and reverence How is it that creatures so despised and sinister so foreign of movement and ostensibly devoid of sociality and emotion have fired the imaginations of poets prophets and painters across time and cultures In Slither Stephen S Hall presents a naturalistic cultural ecological and scientific meditation on these loathed yet magnetic creatures In each chapter he explores a biological aspect of The Snake such as their cold blooded metabolism and venomous nature alongside their mythology artistic depictions and cultural veneration In doing so he explores not only what neurologically triggers our wary fascination with these limbless creatures but also how the current generation of snake scientists is using cutting edge technologies to discover new truths about these evolutionarily ancient creatures truths that may ultimately affect and enhance human health *Evolution and Gender*

Rosemary Hopcroft,2015-12-22 Offering new research and analysis on the relation between gender and evolution this book explains conflict between the sexes and the frequent emergence and stubborn continuation of patriarchal regimes that serve to control the behavior of women in societies around the world both past and present Women and men are different on average But that does not mean they are unequal Indeed understanding average differences is key to the full realization of equality in health care and other dimensions of social life Hopcroft shows that gender differences in physiology psychology and behavior can be traced to slight differences in evolved traits between men and women These differences exist because of sex differences in investment in offspring which meant that in the environment of evolution some adaptive problems were more important for men to solve than for women and vice versa For men the most important adaptive problem to solve was that of finding a mate Men who did not solve this problem are not our ancestors For women the most important adaptive problem to solve was that of successfully bearing and raising children Women who did not solve this problem are not our ancestors These small differences underlie all the differences described in the book including sex differences in mate preferences physiology cognition aggression status striving and emotional experience It can also help explain the differential treatment of children by parents the differential success of boys and girls in modern schools and sex differences in style of communication
